Instructions, typically included as parenthetical notes with selected codes, indicate that a code should not be reported with another code or codes. These instructions are intended to prevent errors of significant probability and are not all inclusive. For example, the code with such instructions may be a component of another code and therefore it would be incorrect to report both codes even when the component service is performed. These instructions are not intended as a listing of all possible code combinations that should not be reported, nor to indicate all possible code combinations that are appropriately reported. When reporting codes for services provided, it is important to assure the accuracy and quality of coding through verification of the intent of the code by use of the related guidelines, parenthetical instructions, and coding resources, including *CPT Assistant* and other publications resulting from collaborative efforts of the American Medical Association with medical specialty societies (ie, *Clinical Examples in Radiology*).

77373 Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions
- *CPT Assistant* Mar 07:7, Oct 07:1; *CPT Changes: An Insider's View* 2007

(Do not report 77373 in conjunction with 77401-77416, 77418)

(For single fraction cranial lesion[s], see 77371, 77372)

Other Procedures

77399 Unlisted procedure, medical radiation physics, dosimetry and treatment devices, and special services
- *CPT Assistant* Nov 98:21

Radiation Treatment Delivery

(Radiation treatment delivery [77401-77416] recognizes the technical component and the various energy levels)

►(For intra-fraction localization and tracking of target, use 0197T)◄

77401 Radiation treatment delivery, superficial and/or ortho voltage
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Summer 08:12

77402 Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; up to 5 MeV
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77403 6-10 MeV
- *CPT Assistant* Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77404 11-19 MeV
- *CPT Assistant* Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77406 20 MeV or greater
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77407 Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks; up to 5 MeV
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77408 6-10 MeV
- *CPT Assistant* Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77409 11-19 MeV
- *CPT Assistant* Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7, Summer 08:12

77411 20 MeV or greater
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77412 Radiation treatment delivery, 3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; up to 5 MeV
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1; *CPT Changes: An Insider's View* 2006
- *Clinical Examples in Radiology* Winter 06:20, Spring 07:7-9, 12, Summer 08:12

77413 6-10 MeV
- *CPT Assistant* Fall 91:14, Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77414 11-19 MeV
- *CPT Assistant* Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77416 20 MeV or greater
- *CPT Assistant* Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77417 Therapeutic radiology port film(s)
- *CPT Assistant* Fall 91:14, Dec 97:11, Feb 06:14, Oct 07:1

77418 Intensity modulated treatment delivery, single or multiple fields/arcs, via narrow spatially and temporally modulated beams, binary, dynamic MLC, per treatment session
- *CPT Assistant* Mar 05:1, 6, May 05:7; *CPT Changes: An Insider's View* 2002, 2005
- *Clinical Examples in Radiology* Summer 07:9

(For intensity modulated treatment planning, use 77301)

(For compensator-based beam modulation treatment delivery, use Category III code 0073T)

77421 Stereoscopic X-ray guidance for localization of target volume for the delivery of radiation therapy
- *CPT Assistant* Oct 07:1; *CPT Changes: An Insider's View* 2006
- *Clinical Examples in Radiology* Winter 06:18, Fall 08:10

(Do not report 77421 in conjunction with 77432, 77435)

►(For placement of interstitial device[s] for radiation therapy guidance, see 31627, 32553, 49411, 55876)◄

Neutron Beam Treatment Delivery

77422 High energy neutron radiation treatment delivery; single treatment area using a single port or parallel-opposed ports with no blocks or simple blocking
- *CPT Changes: An Insider's View* 2006
- *Clinical Examples in Radiology* Winter 06:18

Introduction

Current Procedural Terminology (CPT®), Fourth Edition, is a set of codes, descriptions, and guidelines intended to describe procedures and services performed by physicians and other health care providers. Each procedure or service is identified with a five-digit code. The use of CPT codes simplifies the reporting of services.

Inclusion of a descriptor and its associated five-digit code number in the CPT codebook is based on whether the procedure is consistent with contemporary medical practice and is performed by many practitioners in clinical practice in multiple locations. Inclusion in the CPT codebook does not represent endorsement by the American Medical Association (AMA) of any particular diagnostic or therapeutic procedure. Inclusion or exclusion of a procedure does not imply any health insurance coverage or reimbursement policy.

The CPT code set is published annually in the late summer or early fall as both electronic data files and books. The release of CPT data files on the Internet typically precedes the book by several weeks. In any case, January 1 is the effective date for use of the update of the CPT code set. The interval between the release of the update and the effective date is considered the implementation period and is intended to allow physicians and other providers, payers, and vendors to incorporate CPT changes into their systems. The exceptions to this schedule of release and effective dates are CPT Category III and vaccine product codes, which are released twice a year on January 1 or July 1 with effective dates for use six months later, and CPT Category II codes. Changes to the CPT code set are meant to be applied prospectively from the effective date.

The main body of the material is listed in six sections. Each section is divided into subsections with anatomic, procedural, condition, or descriptor subheadings. The procedures and services with their identifying codes are presented in numeric order with one exception—the entire **Evaluation and Management** section (99201-99499) appears at the beginning of the listed procedures. These items are used by most physicians in reporting a significant portion of their services.

Section Numbers and Their Sequences

Evaluation and Management 99201-99499
Anesthesiology 00100-01999, 99100-99140
Surgery 10021-69990
Radiology (Including Nuclear Medicine and Diagnostic Ultrasound) 70010-79999
Pathology and Laboratory 80048-89356
Medicine (except Anesthesiology) 90281-99199, 99500-99602

The first and last code numbers and the subsection name of the items appear at the top margin of most pages (eg, "11010-11306 Surgery/Integumentary System"). The continuous pagination of the CPT codebook is found on the lower margin of each page along with explanation of any code symbols that are found on that page.

Instructions for Use of the CPT Codebook

Select the name of the procedure or service that accurately identifies the service performed. Do not select a CPT code that merely approximates the service provided. If no such specific code exists, then report the service using the appropriate unlisted procedure or service code. In surgery, it may be an operation; in medicine, a diagnostic or therapeutic procedure; in radiology, a radiograph. Other additional procedures performed or pertinent special services are also listed. When necessary, any modifying or extenuating circumstances are added. Any service or procedure should be adequately documented in the medical record.

It is important to recognize that the listing of a service or procedure and its code number in a specific section of this book does not restrict its use to a specific specialty group. Any procedure or service in any section of this book may be used to designate the services rendered by any qualified physician or other qualified health care professional.

Instructions, typically included as parenthetical notes, with selected codes indicate that a code should not be reported with another code or codes. These instructions are intended to prevent errors of significant probability and are not all inclusive. For example, the code with such instructions may be a component of another code and therefore it would be incorrect to report both codes even when the component service is performed. These instructions are not intended as a listing of all possible code combinations that should not be reported, nor to indicate all possible code combinations that are appropriately reported. When reporting codes for services provided, it is important to assure the accuracy and quality of coding through verification of the intent of the code by use of the related guidelines, parenthetical instructions, and coding resources, including *CPT Assistant* and other publications resulting from collaborative efforts of the American Medical Association with the medical specialty societies (ie, *Clinical Examples in Radiology*).

Format of the Terminology

The CPT code set has been developed as stand-alone descriptions of medical procedures. However, some of the procedures in the CPT codebook are not printed in their entirety but refer back to a common portion of the procedure listed in a preceding entry. This is evident when an entry is followed by one or more indentations. This is done in an effort to conserve space.

Example

25100 Arthrotomy, wrist joint; with biopsy
25105 with synovectomy

(Dose plan is optimized using inverse or forward planning technique for modulated beam delivery [eg, binary, dynamic MLC] to create highly conformal dose distribution. Computer plan distribution must be verified for positional accuracy based on dosimetric verification of the intensity map with verification of treatment set-up and interpretation of verification methodology)

77305 Teletherapy, isodose plan (whether hand or computer calculated); simple (1 or 2 parallel opposed unmodified ports directed to a single area of interest)
→ *CPT Assistant* Fall 91:15, Oct 97:3

77310 intermediate (3 or more treatment ports directed to a single area of interest)
→ *CPT Assistant* Fall 91:15, Oct 97:3

77315 complex (mantle or inverted Y, tangential ports, the use of wedges, compensators, complex blocking, rotational beam, or special beam considerations)
→ *CPT Assistant* Fall 91:15, Oct 97:3

(Only 1 teletherapy isodose plan may be reported for a given course of therapy to a specific treatment area)

77321 Special teletherapy port plan, particles, hemibody, total body
→ *CPT Assistant* Fall 91:14, Oct 97:4

77326 Brachytherapy isodose plan; simple (calculation made from single plane, 1 to 4 sources/ribbon application, remote afterloading brachytherapy, 1 to 8 sources)
→ *CPT Assistant* Winter 91:17, Apr 09:3; *CPT Changes: An Insider's View* 2003

(For definition of source/ribbon, see page 329)

77327 intermediate (multiplane dosage calculations, application involving 5 to 10 sources/ribbons, remote afterloading brachytherapy, 9 to 12 sources)
→ *CPT Assistant* Winter 91:17, Apr 09:3

77328 complex (multiplane isodose plan, volume implant calculations, over 10 sources/ribbons used, special spatial reconstruction, remote afterloading brachytherapy, over 12 sources)
→ *CPT Assistant* Winter 91:17, Apr 09:3

77331 Special dosimetry (eg, TLD, microdosimetry) (specify), only when prescribed by the treating physician
→ *CPT Assistant* Fall 91:13, Oct 97:4

77332 Treatment devices, design and construction; simple (simple block, simple bolus)
→ *CPT Assistant* Oct 97:4
→ *Clinical Examples in Radiology* Summer 07:10, Summer 08:12

77333 intermediate (multiple blocks, stents, bite blocks, special bolus)
→ *CPT Assistant* Oct 97:3
→ *Clinical Examples in Radiology* Summer 07:10, Summer 08:12

77334 complex (irregular blocks, special shields, compensators, wedges, molds or casts)
→ *CPT Assistant* Fall 91:14, Oct 97:4, Dec 08:9, Nov 09:3
→ *Clinical Examples in Radiology* Summer 07:9, 10, Summer 08:12

77336 Continuing medical physics consultation, including assessment of treatment parameters, quality assurance of dose delivery, and review of patient treatment documentation in support of the radiation oncologist, reported per week of therapy
→ *CPT Assistant* Fall 91:15, Oct 97:4, Nov 98:21
→ *Clinical Examples in Radiology*, Summer 08:12, 09:2, 6

77338 Multi-leaf collimator (MLC) device(s) for intensity modulated radiation therapy (IMRT), design and construction per IMRT plan
→ *CPT Changes: An Insider's View* 2010

(Do not report 77338 more than once per IMRT plan)

(For immobilization in IMRT treatment, see 77332-77334)

(Do not report 77338 in conjunction with 0073T, compensator based IMRT)

77370 Special medical radiation physics consultation
→ *CPT Assistant* Fall 91:14, Oct 97:4, May 09:8
→ *Clinical Examples in Radiology* Summer 08:12

Stereotactic Radiation Treatment Delivery

⊙ **77371** Radiation treatment delivery, stereotactic radiosurgery (SRS), complete course of treatment of cranial lesion(s) consisting of 1 session; multi-source Cobalt 60 based
→ *CPT Assistant* Mar 07:7, Oct 07:1; *CPT Changes: An Insider's View* 2007, 2008, 2010

77372 linear accelerator based
→ *CPT Assistant* Mar 07:7, Oct 07:1; *CPT Changes: An Insider's View* 2007, 2008

(For radiation treatment management, use 77432)

77373 Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions
→ *CPT Assistant* Mar 07:7, Oct 07:1; *CPT Changes: An Insider's View* 2007

(Do not report 77373 in conjunction with 77401-77416, 77418)

(For single fraction cranial lesion[s], see 77371, 77372)

Other Procedures

77399 Unlisted procedure, medical radiation physics, dosimetry and treatment devices, and special services
→ *CPT Assistant* Nov 98:21

Radiation Treatment Delivery

(Radiation treatment delivery [77401-77416] recognizes the technical component and the various energy levels)

(For intra-fraction localization and tracking of target, use 0197T)

77401 Radiation treatment delivery, superficial and/or ortho voltage
→ *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
→ *Clinical Examples in Radiology* Summer 08:12

77402 Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; up to 5 MeV
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77403 6-10 MeV
- *CPT Assistant* Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77404 11-19 MeV
- *CPT Assistant* Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77406 20 MeV or greater
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77407 Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks; up to 5 MeV
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77408 6-10 MeV
- *CPT Assistant* Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77409 11-19 MeV
- *CPT Assistant* Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7, Summer 08:12

77411 20 MeV or greater
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77412 Radiation treatment delivery, 3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; up to 5 MeV
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1; *CPT Changes: An Insider's View* 2006
- *Clinical Examples in Radiology* Winter 06:20, Spring 07:7-9, 12, Summer 08:12

77413 6-10 MeV
- *CPT Assistant* Fall 91:14, Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77414 11-19 MeV
- *CPT Assistant* Apr 03:14
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77416 20 MeV or greater
- *CPT Assistant* Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77417 Therapeutic radiology port film(s)
- *CPT Assistant* Fall 91:14, Dec 97:11, Feb 06:14, Oct 07:1

77418 Intensity modulated treatment delivery, single or multiple fields/arcs, via narrow spatially and temporally modulated beams, binary, dynamic MLC, per treatment session
- *CPT Assistant* Mar 05:1, 6, May 05:7, Mar 10:9; *CPT Changes: An Insider's View* 2002, 2005
- *Clinical Examples in Radiology* Summer 07:9

(For intensity modulated treatment planning, use 77301)

(For compensator-based beam modulation treatment delivery, use Category III code 0073T)

77421 Stereoscopic X-ray guidance for localization of target volume for the delivery of radiation therapy
- *CPT Assistant* Oct 07:1; *CPT Changes: An Insider's View* 2006
- *Clinical Examples in Radiology* Winter 06:18, Fall 08:10

(Do not report 77421 in conjunction with 77432, 77435)

(For placement of interstitial device[s] for radiation therapy guidance, see 31627, 32553, 49411, 55876)

Neutron Beam Treatment Delivery

77422 High energy neutron radiation treatment delivery; single treatment area using a single port or parallel-opposed ports with no blocks or simple blocking
- *CPT Changes: An Insider's View* 2006
- *Clinical Examples in Radiology* Winter 06:18

77423 1 or more isocenter(s) with coplanar or non-coplanar geometry with blocking and/or wedge, and/or compensator(s)
- *CPT Changes: An Insider's View* 2006
- *Clinical Examples in Radiology* Winter 06:18

Radiation Treatment Management

►Radiation treatment management is reported in units of five fractions or treatment sessions, regardless of the actual time period in which the services are furnished. The services need not be furnished on consecutive days. Multiple fractions representing two or more treatment sessions furnished on the same day may be counted separately as long as there has been a distinct break in therapy sessions, and the fractions are of the character usually furnished on different days. Code 77427 is also reported if there are three or four fractions beyond a multiple of five at the end of a course of treatment; one or two fractions beyond a multiple of five at the end of a course of treatment are not reported separately. Radiation treatment management requires **and includes** a minimum of one examination of the patient by the physician for medical evaluation and management (eg, assessment of the patient's response to treatment, coordination of care and treatment, review of imaging and/or lab test results with documentation) for each reporting of the radiation treatment management service. The professional services furnished during treatment management typically include:◄

Introduction

Current Procedural Terminology (CPT®), Fourth Edition, is a set of codes, descriptions, and guidelines intended to describe procedures and services performed by physicians and other health care providers. Each procedure or service is identified with a five-digit code. The use of CPT codes simplifies the reporting of services.

Inclusion of a descriptor and its associated five-digit code number in the CPT codebook is based on whether the procedure is consistent with contemporary medical practice and is performed by many practitioners in clinical practice in multiple locations. Inclusion in the CPT codebook does not represent endorsement by the American Medical Association (AMA) of any particular diagnostic or therapeutic procedure. Inclusion or exclusion of a procedure does not imply any health insurance coverage or reimbursement policy.

The CPT code set is published annually in the late summer or early fall as both electronic data files and books. The release of CPT data files on the Internet typically precedes the book by several weeks. In any case, January 1 is the effective date for use of the update of the CPT code set. The interval between the release of the update and the effective date is considered the implementation period and is intended to allow physicians and other providers, payers, and vendors to incorporate CPT changes into their systems. The exceptions to this schedule of release and effective dates are CPT Category III and vaccine product codes, which are released twice a year on January 1 or July 1 with effective dates for use six months later, and CPT Category II codes. Changes to the CPT code set are meant to be applied prospectively from the effective date.

The main body of the Category I section is listed in six sections. Each section is divided into subsections with anatomic, procedural, condition, or descriptor subheadings. The procedures and services with their identifying codes are presented in numeric order with one exception—the entire **Evaluation and Management** section (99201-99499) appears at the beginning of the listed procedures. These items are used by most physicians in reporting a significant portion of their services.

Section Numbers and Their Sequences

Evaluation and Management 99201-99499
Anesthesiology 00100-01999, 99100-99140
Surgery 10021-69990
Radiology (Including Nuclear Medicine and Diagnostic Ultrasound) 70010-79999
Pathology and Laboratory 80048-89356
Medicine (except Anesthesiology) 90281-99199, 99500-99602

The first and last code numbers and the subsection name of the items appear at the top margin of most pages (eg, "11010-11306 Surgery/Integumentary System"). The continuous pagination of the CPT codebook is found on the lower margin of each page along with explanation of any code symbols that are found on that page.

Instructions for Use of the CPT Codebook

Select the name of the procedure or service that accurately identifies the service performed. Do not select a CPT code that merely approximates the service provided. If no such specific code exists, then report the service using the appropriate unlisted procedure or service code. In surgery, it may be an operation; in medicine, a diagnostic or therapeutic procedure; in radiology, a radiograph. Other additional procedures performed or pertinent special services are also listed. When necessary, any modifying or extenuating circumstances are added. Any service or procedure should be adequately documented in the medical record.

It is important to recognize that the listing of a service or procedure and its code number in a specific section of this book does not restrict its use to a specific specialty group. Any procedure or service in any section of this book may be used to designate the services rendered by any qualified physician or other qualified health care professional or entity (eg, hospital, clinical laboratory, home health agency).

A "physician or other qualified healthcare professional" is an individual who is qualified by education, training, licensure/regulation (when applicable), and facility privileging (when applicable) who performs a professional service within his/her scope of practice and independently reports that professional service. These professionals are distinct from "clinical staff". A clinical staff member is a person who works under the supervision of a physician or other qualified healthcare professional and who is allowed by law, regulation and facility policy to perform or assist in the performance of a specified professional service, but who does not individually report that professional service. Other policies may also affect who may report specific services.

Instructions, typically included as parenthetical notes, with selected codes indicate that a code should not be reported with another code or codes. These instructions are intended to prevent errors of significant probability and are not all inclusive. For example, the code with such instructions may be a component of another code and therefore it would be incorrect to report both codes even when the component service is performed. These instructions are not intended as a listing of all possible code combinations that should not be reported, nor to indicate all possible code combinations that are appropriately reported. When reporting codes for services provided, it is important to assure the accuracy and quality of coding through verification of the intent of the code by use of the related guidelines, parenthetical instructions, and coding resources, including *CPT Assistant* and other publications resulting from collaborative efforts of the American Medical Association with the medical specialty societies (ie, *Clinical Examples in Radiology*).

77336 Continuing medical physics consultation, including assessment of treatment parameters, quality assurance of dose delivery, and review of patient treatment documentation in support of the radiation oncologist, reported per week of therapy
- *CPT Assistant* Fall 91:15, Oct 97:4, Nov 98:21
- *Clinical Examples in Radiology* Summer 08:12, Summer 09:2, 6

77338 Multi-leaf collimator (MLC) device(s) for intensity modulated radiation therapy (IMRT), design and construction per IMRT plan
- *CPT Changes: An Insider's View* 2010

(Do not report 77338 more than once per IMRT plan)

(For immobilization in IMRT treatment, see 77332-77334)

(Do not report 77338 in conjunction with 0073T, compensator based IMRT)

77370 Special medical radiation physics consultation
- *CPT Assistant* Fall 91:14, Oct 97:4, May 09:8
- *Clinical Examples in Radiology* Summer 08:12

Stereotactic Radiation Treatment Delivery

⊙ **77371** Radiation treatment delivery, stereotactic radiosurgery (SRS), complete course of treatment of cranial lesion(s) consisting of 1 session; multi-source Cobalt 60 based
- *CPT Assistant* Mar 07:7, Oct 07:1; *CPT Changes: An Insider's View* 2007, 2008, 2010

77372 linear accelerator based
- *CPT Assistant* Mar 07:7, Oct 07:1; *CPT Changes: An Insider's View* 2007, 2008

(For radiation treatment management, use 77432)

77373 Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions
- *CPT Assistant* Mar 07:7, Oct 07:1; *CPT Changes: An Insider's View* 2007

(Do not report 77373 in conjunction with 77401-77416, 77418)

(For single fraction cranial lesion[s], see 77371, 77372)

Other Procedures

77399 Unlisted procedure, medical radiation physics, dosimetry and treatment devices, and special services
- *CPT Assistant* Nov 98:21

Radiation Treatment Delivery

(Radiation treatment delivery [77401-77416] recognizes the technical component and the various energy levels)

(For intra-fraction localization and tracking of target, use 0197T)

77401 Radiation treatment delivery, superficial and/or ortho voltage
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Summer 08:12

77402 Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; up to 5 MeV
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12

77403 6-10 MeV

Introduction

Current Procedural Terminology (CPT®), Fourth Edition, is a set of codes, descriptions, and guidelines intended to describe procedures and services performed by physicians and other health care professionals. The CPT code set is also used by other entities to report outpatient services. Each procedure or service is identified with a five-digit code. The use of CPT codes simplifies the reporting of services.

Inclusion of a descriptor and its associated five-digit code number in the CPT codebook is based on whether the procedure is consistent with contemporary medical practice and is performed by many individuals in clinical practice in multiple locations. Inclusion in the CPT codebook does not represent endorsement by the American Medical Association (AMA) of any particular diagnostic or therapeutic procedure. Inclusion or exclusion of a procedure does not imply any health insurance coverage or reimbursement policy.

The CPT code set is published annually in the late summer or early fall as both electronic data files and books. The release of CPT data files on the Internet typically precedes the book by several weeks. In any case, January 1 is the effective date for use of the update of the CPT code set. The interval between the release of the update and the effective date is considered the implementation period and is intended to allow physicians and other providers, payers, and vendors to incorporate CPT changes into their systems. The exceptions to this schedule of release and effective dates are CPT Category III and vaccine product codes, which are released twice a year on January 1 or July 1 with effective dates for use six months later, and CPT Category II codes. Changes to the CPT code set are meant to be applied prospectively from the effective date.

The main body of the Category I section is listed in six sections. Each section is divided into subsections with anatomic, procedural, condition, or descriptor subheadings. The procedures and services with their identifying codes are presented in numeric order with one exception—the entire **Evaluation and Management** section (99201-99499) appears at the beginning of the listed procedures. These items are used by most physicians in reporting a significant portion of their services.

Section Numbers and Their Sequences

Evaluation and Management	99201-99499
Anesthesiology	00100-01999, 99100-99140
Surgery	10021-69990
Radiology (Including Nuclear Medicine and Diagnostic Ultrasound)	70010-79999
Pathology and Laboratory	80047-89398
Medicine (except Anesthesiology)	90281-99199, 99500-99607

The first and last code numbers and the subsection name of the items appear at the top margin of most pages (eg, "11010-11306 Surgery/Integumentary System"). The continuous pagination of the CPT codebook is found on the lower margin of each page along with explanation of any code symbols that are found on that page.

Instructions for Use of the CPT Codebook

Select the name of the procedure or service that accurately identifies the service performed. Do not select a CPT code that merely approximates the service provided. If no such specific code exists, then report the service using the appropriate unlisted procedure or service code. In surgery, it may be an operation; in medicine, a diagnostic or therapeutic procedure; in radiology, a radiograph. Other additional procedures performed or pertinent special services are also listed. When necessary, any modifying or extenuating circumstances are added. Any service or procedure should be adequately documented in the medical record.

It is important to recognize that the listing of a service or procedure and its code number in a specific section of this book does not restrict its use to a specific specialty group. Any procedure or service in any section of this book may be used to designate the services rendered by any qualified physician or other qualified health care professional or entity (eg, hospital, clinical laboratory, home health agency).

A "physician or other qualified health care professional" is an individual who is qualified by education, training, licensure/regulation (when applicable), and facility privileging (when applicable) who performs a professional service within his/her scope of practice and independently reports that professional service. These professionals are distinct from "clinical staff." A clinical staff member is a person who works under the supervision of a physician or other qualified health care professional and who is allowed by law, regulation, and facility policy to perform or assist in the performance of a specified professional service, but who does not individually report that professional service. Other policies may also affect who may report specific services.

►Throughout the CPT code set the use of terms such as "physician," "qualified health care professional," or "individual" is not intended to indicate that other entities may not report the service. In selected instances, specific instructions may define a service as limited to professionals or limited to other entities (eg, hospital or home health agency).◄

Instructions, typically included as parenthetical notes with selected codes, indicate that a code should not be reported with another code or codes. These instructions are intended to prevent errors of significant probability and are not all inclusive. For example, the code with such instructions may be a component of another code and therefore it would be incorrect to report both codes even when the component service is performed. These instructions are not intended as a listing of all possible code combinations that should not be reported, nor do they indicate all possible code combinations

that are appropriately reported. When reporting codes for services provided, it is important to assure the accuracy and quality of coding through verification of the intent of the code by use of the related guidelines, parenthetical instructions, and coding resources, including *CPT Assistant* and other publications resulting from collaborative efforts of the American Medical Association with the medical specialty societies (ie, *Clinical Examples in Radiology*).

Format of the Terminology

The CPT code set has been developed as stand-alone descriptions of medical procedures. However, some of the procedures in the CPT codebook are not printed in their entirety but refer back to a common portion of the procedure listed in a preceding entry. This is evident when an entry is followed by one or more indentations. This is done in an effort to conserve space.

Example

25100 Arthrotomy, wrist joint; with biopsy

25105 with synovectomy

Note that the common part of code 25100 (the part before the semicolon) should also be considered part of code 25105. Therefore, the full procedure represented by code 25105 should read:

25105 Arthrotomy, wrist joint; with synovectomy

Requests to Update the CPT Nomenclature

The effectiveness of the CPT nomenclature depends on constant updating to reflect changes in medical practice. This can only be accomplished through the interest and timely suggestions of practicing physicians, medical specialty societies, state medical associations, and other organizations and agencies. Accordingly, the AMA welcomes correspondence, inquiries, and suggestions concerning old and new procedures, as well as other matters such as codes and indices.

To submit a suggestion to add, delete, or revise codes contained in the CPT codebook, please contact:

CPT Editorial Research & Development
American Medical Association
515 North State Street
Chicago, Illinois 60654

Coding change request forms are available at the AMA's CPT Web site: www.ama-assn.org/ama/pub/category/3866.html.

All proposed changes of the CPT codebook will be considered by the CPT Editorial Panel with consultation of appropriate medical specialty societies.

Guidelines

Specific guidelines are presented at the beginning of each of the sections. These guidelines define items that are necessary to appropriately interpret and report the procedures and services contained in that section. For example, in the **Medicine** section, specific instructions are provided for handling unlisted services or procedures, special reports, and supplies and materials provided. Guidelines also provide explanations regarding terms that apply only to a particular section. For instance, **Radiology Guidelines** provide a definition of the unique term, "radiological supervision and interpretation." While in **Anesthesia,** a discussion of reporting time is included.

Add-on Codes

Some of the listed procedures are commonly carried out in addition to the primary procedure performed. These additional or supplemental procedures are designated as add-on codes with the + symbol and they are listed in **Appendix D** of the CPT codebook. Add-on codes in *CPT 2013* can be readily identified by specific descriptor nomenclature that includes phrases such as "each additional" or "(List separately in addition to primary procedure)."

The add-on code concept in *CPT 2013* applies only to add-on procedures or services performed by the same physician. Add-on codes describe additional intra-service work associated with the primary procedure, eg, additional digit(s), lesion(s), neurorrhaphy(s), vertebral segment(s), tendon(s), joint(s).

Add-on codes are always performed in addition to the primary service or procedure and must never be reported as a stand-alone code. All add-on codes found in the CPT codebook are exempt from the multiple procedure concept (see the modifier 51 definition in **Appendix A**).

Modifiers

A modifier provides the means to report or indicate that a service or procedure that has been performed has been altered by some specific circumstance but not changed in its definition or code. Modifiers also enable health care professionals to effectively respond to payment policy requirements established by other entities. The judicious application of modifiers obviates the necessity for separate procedure listings that may describe the modifying circumstance. Modifiers may be used to indicate to the recipient of a report that:

- A service or procedure had both a professional and technical component.
- A service or procedure was performed by more than one physician and/or in more than one location.
- A service or procedure was increased or reduced.
- Only part of a service was performed.
- An adjunctive service was performed.
- A bilateral procedure was performed.
- A service or procedure was provided more than once.
- Unusual events occurred.

Example

A physician providing diagnostic or therapeutic radiology services, ultrasound, or nuclear medicine services in a hospital would add modifier 26 to report the professional component.

73090 with modifier 26 = Professional component only for an X-ray of the forearm

Example

Two surgeons may be required to manage a specific surgical problem. When two surgeons work together as primary surgeons performing distinct part(s) of a procedure, each surgeon should report his/her distinct operative work by adding modifier 62 to the procedure code and any associated code(s) for that procedure as long as both surgeons continue to work

77336 Continuing medical physics consultation, including assessment of treatment parameters, quality assurance of dose delivery, and review of patient treatment documentation in support of the radiation oncologist, reported per week of therapy
- *CPT Assistant* Fall 91:15, Oct 97:4, Nov 98:21, Oct 10:3
- *Clinical Examples in Radiology* Summer 08:12, Summer 09:2, 6

77338 Multi-leaf collimator (MLC) device(s) for intensity modulated radiation therapy (IMRT), design and construction per IMRT plan
- *CPT Assistant* Oct 10:3, Dec 10:15; *CPT Changes: An Insider's View* 2010

(Do not report 77338 more than once per IMRT plan)

(For immobilization in IMRT treatment, see 77332-77334)

(Do not report 77338 in conjunction with 0073T, compensator based IMRT)

77370 Special medical radiation physics consultation
- *CPT Assistant* Fall 91:14, Oct 97:4, May 09:8, Oct 10:3
- *Clinical Examples in Radiology* Summer 08:12, Summer 09:6, 9

Stereotactic Radiation Treatment Delivery

⊙ **77371** Radiation treatment delivery, stereotactic radiosurgery (SRS), complete course of treatment of cranial lesion(s) consisting of 1 session; multi-source Cobalt 60 based
- *CPT Assistant* Mar 07:7, Oct 07:1, Oct 10:3, Jul 11:12; *CPT Changes: An Insider's View* 2007, 2008, 2010
- *Clinical Examples in Radiology* Summer 09:7

77372 linear accelerator based
- *CPT Assistant* Mar 07:7, Oct 07:1, Oct 10:3, Jul 11:12; *CPT Changes: An Insider's View* 2007, 2008
- *Clinical Examples in Radiology* Summer 09:7

(For radiation treatment management, use 77432)

77373 Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions
- *CPT Assistant* Mar 07:7, Oct 07:1, Oct 10:3, Jul 11:12; *CPT Changes: An Insider's View* 2007
- *Clinical Examples in Radiology* Summer 09:7

(Do not report 77373 in conjunction with 77401-77416, 77418)

(For single fraction cranial lesion[s], see 77371, 77372)

Other Procedures

77399 Unlisted procedure, medical radiation physics, dosimetry and treatment devices, and special services
- *CPT Assistant* Nov 98:21, Oct 10:3

Radiation Treatment Delivery

(Radiation treatment delivery [77401-77416] recognizes the technical component and the various energy levels)

(For intra-fraction localization and tracking of target, use 0197T)

77401 Radiation treatment delivery, superficial and/or ortho voltage
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1, Oct 10:3
- *Clinical Examples in Radiology* Summer 08:12, Summer 09:7

77402 Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; up to 5 MeV
- *CPT Assistant* Apr 03:14, Aug 03:10, Oct 07:1, Oct 10:3
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12, Summer 09:7

77403 6-10 MeV
- *CPT Assistant* Apr 03:14, Oct 10:3
- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12, Summer 09:7

- *Clinical Examples in Radiology* Spring 07:7-9, 12, Summer 08:12, Summer 09:7

Introduction

►*Current Procedural Terminology* (CPT®), Fourth Edition, is a set of codes, descriptions, and guidelines intended to describe procedures and services performed by physicians and other health care professionals, or entities. Each procedure or service is identified with a five-digit code. The use of CPT codes simplifies the reporting of procedures and services. In the CPT code set, the term "procedure" is used to describe services, including diagnostic tests.

Inclusion of a descriptor and its associated five-digit code number in the CPT Category I code set is based on whether the procedure or service is consistent with contemporary medical practice and is performed by many practitioners in clinical practice in multiple locations. Inclusion in the CPT code set does not represent endorsement by the American Medical Association (AMA) of any particular diagnostic or therapeutic procedure or service. Inclusion or exclusion of a procedure or service does not imply any health insurance coverage or reimbursement policy.◄

The CPT code set is published annually in the late summer or early fall as both electronic data files and books. The release of CPT data files on the Internet typically precedes the book by several weeks. In any case, January 1 is the effective date for use of the update of the CPT code set. The interval between the release of the update and the effective date is considered the implementation period and is intended to allow physicians and other providers, payers, and vendors to incorporate CPT changes into their systems. The exceptions to this schedule of release and effective dates are CPT Category III and vaccine product codes, which are released twice a year on January 1 or July 1 with effective dates for use six months later, and CPT Category II codes. Changes to the CPT code set are meant to be applied prospectively from the effective date.

The main body of the Category I section is listed in six sections. Each section is divided into subsections with anatomic, procedural, condition, or descriptor subheadings. The procedures and services with their identifying codes are presented in numeric order with one exception—the entire **Evaluation and Management** section (99201-99499) appears at the beginning of the listed procedures. These items are used by most physicians in reporting a significant portion of their services.

Section Numbers and Their Sequences

Evaluation and Management 99201-99499
Anesthesiology 00100-01999, 99100-99140
Surgery 10021-69990
Radiology (Including Nuclear Medicine and Diagnostic Ultrasound) 70010-79999
Pathology and Laboratory 80047-89398
Medicine (except Anesthesiology) 90281-99199, 99500-99607

The first and last code numbers and the subsection name of the items appear at the top margin of most pages (eg, "11010-11306 Surgery/Integumentary System"). The continuous pagination of the CPT codebook is found on the lower margin of each page along with explanation of any code symbols that are found on that page.

Instructions for Use of the CPT Codebook

Select the name of the procedure or service that accurately identifies the service performed. Do not select a CPT code that merely approximates the service provided. If no such specific code exists, then report the service using the appropriate unlisted procedure or service code. In surgery, it may be an operation; in medicine, a diagnostic or therapeutic procedure; in radiology, a radiograph. Other additional procedures performed or pertinent special services are also listed. When necessary, any modifying or extenuating circumstances are added. Any service or procedure should be adequately documented in the medical record.

►It is equally important to recognize that as techniques in medicine and surgery have evolved, new types of services, including minimally invasive surgery, as well as endovascular, percutaneous, and endoscopic interventions have challenged the traditional distinction of Surgery vs Medicine. Thus, the listing of a service or procedure in a specific section of this book should not be interpreted as strictly classifying the service or procedure as "surgery" or "not surgery" for insurance or other purposes. The placement of a given service in a specific section of the book may reflect historical or other considerations (eg, placement of the percutaneous peripheral vascular endovascular interventions in the Surgery/Cardiovascular System section, while the percutaneous coronary interventions appear in the Medicine/Cardiovascular section).

When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and exact same subspecialties as the physician. A "physician or other qualified health care professional" is an individual who is qualified by education, training, licensure/regulation (when applicable), and facility privileging (when applicable) who performs a professional service within his/her scope of practice and independently reports that professional service. These professionals are distinct from "clinical staff." A clinical staff member is a person who works under the supervision of a physician or other qualified health care professional and who is allowed by law, regulation, and facility policy to perform or assist in the performance of a specified professional service, but who does not individually report that professional service. Other policies may also affect who may report specific services.◄

Throughout the CPT code set the use of terms such as "physician," "qualified health care professional," or "individual" is not intended to indicate that other entities may not report the service. In selected instances, specific instructions may

Throughout the CPT code set the use of terms such as "physician," "qualified health care professional," or "individual" is not intended to indicate that other entities may not report the service. In selected instances, specific instructions may define a service as limited to professionals or limited to other entities (eg, hospital or home health agency).

Instructions, typically included as parenthetical notes with selected codes, indicate that a code should not be reported with another code or codes. These instructions are intended to prevent errors of significant probability and are not all inclusive. For example, the code with such instructions may be a component of another code and therefore it would be incorrect to report both codes even when the component service is performed. These instructions are not intended as a listing of all possible code combinations that should not be reported, nor do they indicate all possible code combinations that are appropriately reported. When reporting codes for services provided, it is important to assure the accuracy and quality of coding through verification of the intent of the code by use of the related guidelines, parenthetical instructions, and coding resources, including *CPT Assistant* and other publications resulting from collaborative efforts of the American Medical Association with the medical specialty societies (ie, *Clinical Examples in Radiology*).

Format of the Terminology

The CPT code set has been developed as stand-alone descriptions of medical procedures. However, some of the procedures in the CPT codebook are not printed in their entirety but refer back to a common portion of the procedure listed in a preceding entry. This is evident when an entry is followed by one or more indentations. This is done in an effort to conserve space.

Example

25100 Arthrotomy, wrist joint; with biopsy

25105 with synovectomy

Note that the common part of code 25100 (the part before the semicolon) should also be considered part of code 25105. Therefore, the full procedure represented by code 25105 should read:

25105 Arthrotomy, wrist joint; with synovectomy

Requests to Update the CPT Nomenclature

►The effectiveness of the CPT nomenclature depends on constant updating to reflect changes in medical practice. This can only be accomplished through the interest and timely suggestions of practicing physicians and other qualified health care professionals, specialty/professional societies, state medical associations, organizations, agencies, individual users of the CPT code set, and other stakeholders. Accordingly, the AMA welcomes correspondence, inquiries, and suggestions concerning CPT coding and nomenclature for old and new procedures and services, as well as any matters relating to the CPT code set.

For information on submission of an application to add, delete, or revise codes contained in the CPT code set, please see www.ama-assn.org/go/cpt-processfaq or contact:◄

CPT Editorial Research & Development
American Medical Association
330 North Wabash Avenue
Suite 39300
Chicago IL 60611-5885

►Code change applications are available at the AMA's CPT Web site: www.ama-assn.org/go/cpt-application.

All proposed changes to the CPT code set will be considered by the CPT Editorial Panel, in consultation with medical specialty societies as represented by the CPT Advisory Committee, other health care professional societies as represented by the Health Care Professionals Advisory Committee (HCPAC), and other interested parties.◄

Application Submission Requirements

►All complete CPT code change applications are reviewed and evaluated by the CPT staff, the CPT/HCPAC Advisory Committee, and the CPT Editorial Panel. Strict conformance with the following is required for review of a code change application:

- Submission of a complete application, including all necessary supporting documents
- Adherence to all posted deadlines
- Cooperation with requests from the CPT staff and/or Editorial Panel members for clarification and information; ***and***
- Compliance with CPT Lobbying Policy◄

General Criteria for Category I and Category III Codes

►All Category I or Category III code change applications must satisfy each of the following criteria:

- The proposed descriptor is unique, well-defined, and describes a procedure or service that is clearly identified and distinguished from existing procedures and services already in the CPT code set.
- The descriptor structure, guidelines, and instructions are consistent with the current CPT Editorial Panel standards for maintenance of the code set.
- The proposed descriptor for the procedure or service is neither a fragmentation of an existing procedure or service nor currently reportable as a complete service by one or more existing codes (with the exclusion of unlisted codes). However, procedures and services frequently performed together may require new or revised codes.
- The structure and content of the proposed code descriptor accurately reflects the procedure or service as typically performed. If always or frequently performed with one or more other procedures or services, the descriptor structure and content will reflect the typical combination or complete procedure or service.
- The descriptor for the procedure or service is not proposed as a means to report extraordinary circumstances related to

Case 1:13-cv-24503-KMM Document 148-13 Entered on FLSD Docket 03/25/2016 Page 20 of 20

77331 Special dosimetry (eg, TLD, microdosimetry) (specify), only when prescribed by the treating physician
- *CPT Assistant* Fall 91:13, Oct 97:4
- *Clinical Examples in Radiology* Summer 09:5, 6

77332 Treatment devices, design and construction; simple (simple block, simple bolus)
- *CPT Assistant* Oct 97:4, Oct 10:3
- *Clinical Examples in Radiology* Summer 07:10, Summer 08:12, Summer 09:6

77333 intermediate (multiple blocks, stents, bite blocks, special bolus)
- *CPT Assistant* Oct 97:3, Oct 10:3
- *Clinical Examples in Radiology* Summer 07:10, Summer 08:12, Summer 09:6

77334 complex (irregular blocks, special shields, compensators, wedges, molds or casts)
- *CPT Assistant* Fall 91:14, Oct 97:4, Dec 08:9, Nov 09:3, Oct 10:3, Dec 10:15

Dear Rhonda,

Enclosed please find my affidavit as requested, also please find excellent articles on **hyperfractionation** for Radiation Therapy. The articles document that hyperfractionation or two times a day treatment with radiation therapy which is the treatment protocol that I used with my patient has a higher cure rate , less tissue morbidity i.e. no cartilage necrosis and is much more efficacious and beneficial for treating the patient's tumors. Also enclosed please find all requested records. Also as you know, **Medicine** is an **art** as well as a **science**. I have never had a patient with tissue necrosis of the cartilage of the nose or of the ear or of gum/bone necrosis when treating the lip.
Our patients wait for four hours between each treatment sessions. And for each different tumor and separate tumor site, the appropriate radiation set up, lead shields, nasal bolus, and or stents must be utilized. Thank you again, Be well.

Respectfully yours,

Gary L. Marder, D.O.

Radiation Therapy and You: Support for People With Cancer

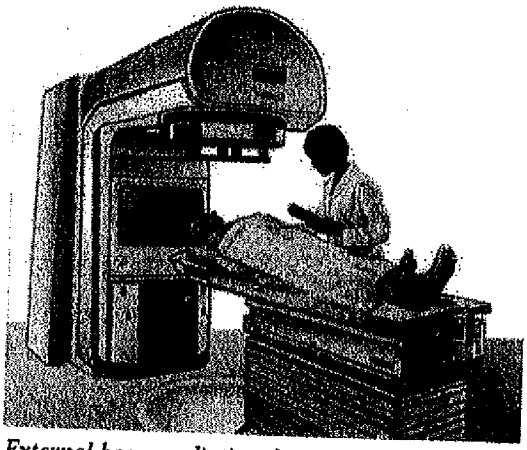
Posted: 04/20/2007

External Beam Radiation Therapy

What is external beam radiation therapy?

External beam radiation therapy comes from a machine that aims radiation at your cancer. The machine is large and may be noisy. It does not touch you, but rotates around you, sending radiation to your body from many directions.

External beam radiation therapy is a local treatment, meaning that the radiation is aimed only at a specific part of your body. For example, if you have lung cancer, you will get radiation to your chest only and not the rest of your body.



External beam radiation therapy comes from a machine that aims radiation at your cancer.

How often will I get external beam radiation therapy?

Most people get external beam radiation therapy once a day, 5 days a week, Monday through Friday. Treatment lasts for 2 to 10 weeks, depending on the type of cancer you have and the goal of your treatment. The time between your first and last radiation therapy sessions is called a course of treatment.

Radiation is sometimes given in smaller doses twice a day (hyperfractionated radiation therapy). Your doctor may prescribe this type of treatment if he or she feels that it will work better. Although side effects may be more severe, there may be fewer late side effects. Doctors are doing research to see which types of cancer are best treated this way.

1.0 INTRODUCTION

According to the American Cancer Society *(ACS 1994)*, larynx cancer will be diagnosed in 12,800 patients in the United States in 1994. Ten thousand of these will be males, 2,600 females; approximately 3,800 patients will die from larynx cancer. The overall five-year survival is 67% for whites and 53% for blacks. Approximately 75% of tumors are located in the glottis.[7]

In general, the treatment policy in the United States for early glottic cancer consists of definitive radiotherapy with surgery reserved for salvage. While some patients with T2 disease are selected for surgery, many patients are offered radiotherapy alone as the initial step in management.

Early T1 and T2 regions of the vocal cord are usually treated with small fields *(4-6 cm)* encompassing the primary site only. Total doses have varied from 56.25 Gy to 78 Gy depending on the extent of tumor and fractionation.[6,13,14] Within this dose range, a variety of fractionation schedules have been used. In once-a-day programs, fraction size has varied from 1.8 Gy to 3.4 Gy.[3,9,11] Conventional treatment is considered to be 1.8-2.0 Gy per fraction to a total dose of 60-70 Gy. Several tumor related, patient related and treatment related factors have been found to influence the chance of local control: stage, impaired cord mobility, gender, anterior commissure involvement, subglottic extent, obesity, fraction size, field size, overall time and total dose. While more than 3,000 patients have been reported in the literature, nearly all of these come from single institution retrospective studies. Prospective trials focusing on laryngeal carcinoma and evaluating stage, fractionation or other factors have not been performed to our knowledge.

1.1 Altered Fractionation in Head and Neck Cancer

For T2 vocal cord carcinoma, fractionation schedules can be grouped into three categories: hypofractionation *(2.5-3.4 Gy per fraction, once a day)*, conventional fractionation *(1.8-2.25 Gy per fraction, once a day)*, and hyperfractionation *(1.1-1.2 Gy per fraction, twice a day)*. Slevin et al. have recently reviewed the influence of tumor dose versus dose per fraction on local control and the occurrence of late normal tissue complications using hypofractionation versus conventional fractionation.[10] Interestingly, local control was essentially equivalent *(70-75%)* regardless of fraction size or dose. However, patients receiving 3.3 to 3.4 Gy per fraction experienced a higher incidence of late complications including necrosis, severe edema or stenosis resulting in laryngectomy in approximately 4% of patients.

Hyperfractionation has been used in small retrospective studies for laryngeal carcinoma. The University of Florida has reported improved results in 35 patients treated with hyperfractionation in comparison to historical controls in T2 lesions.[3,8] Fein et al. have shown that local control at five years appears to increase from 81% to 91% when comparing 2.25 Gy once a day *(total dose 67.5 Gy)* to 1.2 Gy twice a day *(total dose 74.4-76.8 Gy)*. A similar retrospective comparison was performed at M.D. Anderson Cancer Center.[25] Forty one patients with T2 and T3 supraglottic cancers showed improved two-year control *(87% vs, 76%, p = 0.4)* using hyperfractionation compared to conventional treatment.

Hyperfractionation in head and neck cancer using doses of 1.1-1.2 Gy per fraction twice daily has been tested in several prospective studies including a completed RTOG *(79-13)* randomized phase III trial, and EORTC trial, an Indian trial, and an RTOG *(83-13)* randomized phase I/II trial.[1,2,4,5] In the EORTC trial,[4] patients with oropharyngeal carcinoma, Stage T2-T3, N0-N1 *(< 3 cm)* were randomized to receive conventional radiotherapy with 70 Gy in 35 fractions in seven weeks or hyperfractionated radiotherapy with 80.5 Gy in 70 fractions *(1.15 Gy per fraction)* in seven weeks. Results show a significantly improved local-regional control *(59% vs. 40% at 5 years)* rate for patients with T2-3N0-N1 disease when treated with hyperfractionated radiotherapy compared to conventional treatment *(p=0.001)*. A borderline significant advantage in five year survival for all patients enrolled was seen in the hyperfractionation arm *(p=0.08)*. In the Indian trial, 212 patients with T2-T3, N0-N1 head and neck cancers were randomized to receive once-a-day radiotherapy with 2 Gy per fraction to 66 Gy in 33 fractions over 6.5 weeks or twice a day radiotherapy with 1.2 Gy per fraction to 79.2 Gy in 66 fractions over 6.5 weeks. Of the 176 evaluable patients, those treated with the BID regimen had a significantly better two-year disease free survival rate *(63% vs. 33%, p= < 0.01)* and actuarial survival *(71% vs. 45%, p= < 0.005)*.[2] However, the total dose *(66 Gy)* for the standard fractionation arm is lower than that which is commonly used in the United States for these patients.

LABORATORY SCIENCES

Hyperfractionated External Beam Radiation Therapy in the Treatment of Murine Transgenic Retinoblastoma

Brandy C. Hayden, BS; Timothy G. Murray, MD; Nicole Cicciarelli; Ingrid U. Scott, MD, MPH; Anastassia Alexandridou, MD; Eleut Hernandez, LAT; Xiaodong Wu, PhD; Arnold M. Markoe, MD; William Feuer, MS; Lilia Fulton, BA; Joan M. O'Brien, MD

Objective: To determine the in vivo efficacy of hyperfractionated external beam radiation therapy (EBRT) in comparison with standard daily EBRT in a murine model of heritable retinoblastoma.

Methods: Two hundred twenty eyes from 6-week-old simian virus-40 large T-antigen–positive mice were treated with a total dose of EBRT ranging from 10-76 Gy (1000 to 7600 rad). One hundred ten eyes underwent EBRT administered in 2.0-Gy (200-rad) fractions once per day. Forty-two eyes received hyperfractionated EBRT administered in 1.2-Gy (120-rad) fractions twice per day, while 48 eyes received EBRT twice daily in fractions of 5.0 Gy (500 rad). Twenty eyes served as untreated controls. All eyes were obtained for histopathologic examination and graded positive if any tumor was present.

Results: A dose-dependent inhibition of ocular tumor was observed for EBRT in these transgenic retinoblastoma mice. The tumor control dose for 50% of eyes (TCD_{50}) treated with 2.0 Gy fractions of EBRT was 45 Gy (4500 rad) when treatments were administered once daily. A significant increase in tumor control was observed when treatments were administered twice per day at fractions of 1.2 Gy, resulting in a TCD_{50} of 33 Gy (3300 rad) ($P=.003$). A further increase in tumor control was observed when twice-daily EBRT was administered in 5.0 Gy fractions resulting in a TCD_{50} of 28 Gy (2800 rad).

Conclusions: Hyperfractionated EBRT safely and effectively controls intraocular retinoblastoma in this transgenic animal model. Use of hyperfractionation allows for a reduction in total radiation delivered dose, while shortening the total treatment time.

Clinical Relevance: This treatment approach may be applicable in the management of pediatric retinoblastoma by maintaining excellent tumor control, while reducing treatment-associated complications.

Arch Ophthalmol. 2002;120:353-359

From the Bascom Palmer Eye Institute, Department of Ophthalmology (Mss Hayden and Cicciarelli, Drs Murray, Scott, Alexandridou, and Markoe, and Messrs Hernandez and Feuer), and Department of Radiation/Oncology, Sylvester Comprehensive Cancer Center (Drs Murray, Wu, and Markoe), University of Miami, Miami, Fla; and Department of Ophthalmology, University of California, San Francisco (Ms Fulton and Dr O'Brien).

RETINOBLASTOMA, arising from embryonic photoreceptor cells in the eye, is the most common primary intraocular malignancy in childhood.[1,2] Children with a germline *RB* gene mutation are predisposed to bilateral eye involvement and a lifetime predilection for cancer involvement.[3-5]

Recent evidence suggests an increase in the incidence of retinoblastoma during the last 40 years, possibly because of more successful methods of treatment resulting in improved patient survival and/or increased mutation rates.[6] Current treatment methods include enucleation, scleral plaque irradiation, cryotherapy, photocoagulation, external beam radiotherapy (EBRT), chemotherapy, and combined therapeutic modalities.[2,7,8]

Retinoblastoma is a highly radiosensitive tumor and can be effectively treated with ionizing EBRT.[9-11] In the past, EBRT was administered most commonly to children with bilateral retinoblastoma that was untreatable with local therapies.[12] This treatment modality was generally preferred if a tumor was larger than 15 mm in diameter, if it was located adjacent to the optic disc or fovea, if multiple tumors were present, or if extensive vitreous seeding of tumor cells was noted.[9] Failures of EBRT leading to enucleation were often due to progression of vitreous seeds, recurrences from previously existing tumors, or the development of new intraocular tumors.[13]

Although EBRT has been shown to improve ocular and visual prognosis in retinoblastoma survivors, it is associated with multiple complications.[14-18] Current concerns related to the application of radiotherapy in the treatment of retinoblastoma have focused on delayed complications including radiation-enhanced second tumor

FCSO-12292014-00000435

FAR1580615000619317

MATERIALS AND METHODS

The study protocol was approved by the University of Miami School of Medicine Animal Care and Use Review Board, Miami, Fla. All experiments in this study were conducted in accordance with the Association for Research in Vision and Ophthalmology guidelines for the use of animals in ophthalmologic and vision research.

Two hundred twenty simian virus-40 large T-antigen transgene-bearing mice were treated, as described below, beginning at 6 weeks of age. Transgenic animals were identified through polymerase chain reaction analysis of tail DNA. Transgene-positive animals develop bilateral, heritable retinoblastoma that resembles human retinoblastoma. All animals were anesthetized with a combination of intraperitoneal ketamine hydrochloride and xylazine hydrochloride and topical proparacaine hydrochloride for the purpose of tail blood extraction. No anesthesia was required for EBRT.

ORBITAL EBRT

Two hundred twenty mouse eyes were treated, as described herein, with fractionated EBRT with the use of a 10-mV x-ray machine (Clinac-2100; Varian Medical Systems, Inc, Palo Alto, Calif). Animals were briefly immobilized for treatment in specially constructed cages and shielded to minimize radiation to the midline nonocular structures (**Figure 1**). Animals were placed, head first, in the immobilization tube, treatment ports were confirmed, and radiation was delivered at 3.24 Gy/min (324 rad/min) to a field size of 7.0×7.0 cm, with the heads of 4 mice radiated simultaneously. This treatment effectively focuses therapy to the orbit, while shielding nonocular midline structures. The total treatment doses ranged from 24-76 Gy (2400 to 7600 rad).

One hundred ten eyes underwent EBRT administered in 2.0-Gy fractions delivered once per day, 5 days per week. Forty-two eyes received EBRT twice per day, 5 days per week, in fractions of 1.2 Gy, while 48 eyes received similar treatment in fractions of 5.0 Gy. All radiation treatments delivered twice per day were administered 6 to 8 hours apart. An additional 20 eyes from simian virus-40 T-antigen–positive transgenic mice served as untreated controls.

HISTOPATHOLOGIC STUDY OF TRANSGENIC MICE

At 16 weeks of age, all animals were killed with an overdose of ketamine and xylazine. Both eyes were enucleated and immediately immersion-fixed in 10% formalin. The eyes were sectioned serially with 80-µm sections stained with hematoxylin-eosin. Light microscopic examination was performed on all histopathologic sections in a masked fashion. The eyes were graded positive for tumor development if any histopathologic evidence of tumor was present. Eyes were also evaluated for evidence of corneal, lenticular, retinal, or scleral toxic effects.

STATISTICAL ANALYSIS

To determine the dose-response relationships among the different EBRT fractionation schemes, the data from all experimental groups were combined and subjected to probit statistical analysis. Total radiation dose was entered as a linear predictor in a maximum likelihood probit regression model. The model was analyzed for goodness-of-fit, and logistic regression analysis was used to estimate the relationship between EBRT dose and tumor control.

Figure 1. Midline shielding and immobilization apparatus for orbital external beam radiation therapy.

risk for children with *RB1* germline mutations, radiation related midface hypoplasia, cataract and, rarely, radiation vasculopathy or optic neuropathy.[19-21]

Hyperfractionated radiotherapy may offer the potential for effective treatment, while minimizing toxicity and lowering the risk of secondary malignancy. Hyperfractionated radiotherapy involves the delivery of an increased number of fractional radiation doses of smaller than conventional size in an overall treatment time comparable with, or shorter than, that required for conventional EBRT.[22] It has demonstrated increased tumor control in other pediatric tumors.[23-25] Studies of pediatric acute myeloblastic leukemia demonstrated that tumor control could be achieved at lower total treatment doses when twice- vs once-daily treatment was used.[26-28] Hyperfractionated radiation therapy was also found to be effective in the treatment of medulloblastoma, ependymomas, and rhabdomyosarcoma.[25,29-33]

In the current study, a transgenic mouse model of heritable retinoblastoma was used to evaluate the in vivo efficacy of twice-daily hyperfractionated EBRT (1.2- and 5.0-Gy [120- and 500-rad] fractions) compared with treatment delivered once per day (2.0-Gy [200-rad] fractions).

RESULTS

All untreated control eyes exhibited large intraocular tumors (**Figure 2**). None of the eyes treated with a total radiation dose below 10 Gy (1000 rad) exhibited tumor control (**Table 1**).

A dose-dependent inhibition of ocular tumor was observed for EBRT in these transgenic retinoblastoma mice at all treatment fractions and dosing strategies. Increas-

FCSO-12292014-00000436

FAR1SB061500019317

ing the frequency of radiation treatment, while decreasing the fraction delivered per treatment, was significantly associated with increased tumor control when 1.2 Gy hyperfractionation was compared with 2.0 Gy conventional daily fractionation (**Figure 3** and **Figure 4**). The tumor control dose for 50% of the eyes (TCD_{50}) treated once daily with 2.0 Gy fractions was 45.0 Gy (4500 rad) at 16 weeks of age. The tumor control dose decreased to 33.9 Gy (3390 rad) for animals treated with radiation in 1.2-Gy fractions twice per day. Increasing the fractionated dose from 1.2-Gy to 5.0-Gy fractions twice per day further increased tumor control, resulting in a TCD_{50} of 28.0 Gy (2800 rad). However, corneal and lenticular damage was observed in all of the eyes treated with these high-dose fractions of 5.0 Gy (**Figure 5**). None of the animals treated with dose fractions of either 2.0 or 1.2 Gy showed evidence of toxicity.

Probit regression analysis was used for estimating the relationship between dose and tumor control, and logistic regression analysis demonstrated that the dose-response curves were significantly different among the 3 treatment groups (P=.003) (**Figure 6**).

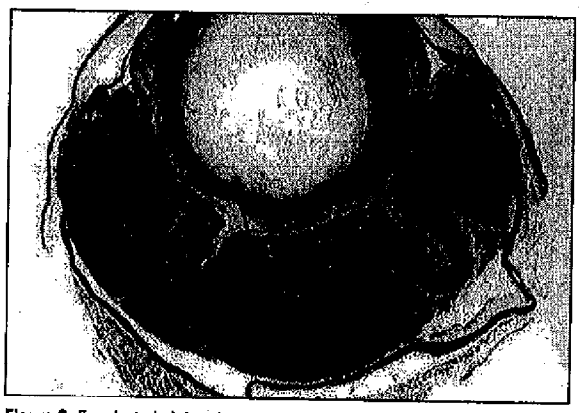

Figure 2. Enucleated globe of a 16-week-old transgenic retinoblastoma mouse that received no treatment (control). Note large retinal tumor (original magnification ×7).

COMMENT

External beam radiation therapy has been used for the treatment of retinoblastoma for more than 50 years. Focal delivery to the eye, new megavoltage machines, and lens-sparing techniques have contributed to the increasing efficacy of this treatment modality, improving ocular and visual prognoses, while decreasing treatment-related morbidities.[34] The current study demonstrates that hyperfractionation (increasing the frequency of radiation treatment, while decreasing the fraction delivered per treatment) is significantly associated with increased tumor control in a murine transgenic model of retinoblastoma.

A wide range of EBRT dose fractionation schedules have been used previously in the management of childhood retinoblastoma; however, the choice has been largely empirical.[13,35,36] Treatment variables have recently become more defined, with the most common fractionation schemes using fractions ranging from 1.8 Gy (180 rad) to 2.0 Gy administered once per day with total doses not exceeding 50.0 Gy. Radiation fractions greater than 2.0 Gy per treatment are potentially associated with severe ocular and periocular morbidity, particularly in eyes receiving concomitant chemotherapy. Total radiation doses exceeding 45.0 Gy may lead to lacrimal gland damage and decreased tear production. At total doses exceeding 50.0 Gy, radiation retinopathy may be seen.[37]

Despite the recent development of more defined treatment schedules, optimal dose-fractionation schedules are still unclear. The use of this unique mouse model of retinoblastoma has allowed for preclinical modeling of a variety of treatment regimens. As reported previously, the transgenic mouse model used in this study has histopathologic, immunocytochemical, electron microscopic, and clinical characteristics similar to those of human retinoblastoma.[38-41] In addition, the course of tumor development parallels that of human retinoblastoma.

Hyperfractionated radiotherapy refers to the delivery of an increased number of fractional radiation doses of smaller than conventional size in an overall treatment time comparable to, or shorter than, that required for conventional EBRT.[22] Hyperfractionation is usually accomplished by delivering more than 1 fraction per day in sessions ranging from 4 to 8 hours apart. The rationale underlying the application of hyperfractionation is to exploit the differential radiosensitivities of the target volume tissues showing acute effects from those showing late effects, to decrease the rate of complications, while improving local tumor control.[22] Radiosensitivity is related inversely to the degree of differentiation of the tissue and directly related to mitotic and mitochondrial activity.[37] Although retinoblastoma has been characterized as a moderately well-differentiated tumor, it may be particularly susceptible to hyperfractionated EBRT because of the tumor's high mitotic activity.

A phase 1/2 study was conducted to investigate the efficacy and toxicity of hyperfractionated radiotherapy in 136 children with poor-prognosis brainstem tumors.[30] Children with brainstem tumors were treated with hyperfractionated EBRT at 1.1 Gy (110 rad) twice daily (minimum of 4-6 hours between fractions) to 66.0 Gy (6600 rad) in 6 weeks. Most patients (71% [24/34]) improved clinically during the course of treatment. This prompted a dose escalation from 66.0 Gy to 70.2 Gy (7020 rad) and then to 75.6 Gy (7560 rad).[31] The results of that study investigating escalated doses of hyperfractionated radiotherapy demonstrated a trend toward increased overall survival and disease-free survival at 70.2 Gy. Although neurologic improvement at 70.2 Gy was similar to that at 66.0 Gy (77% [30/39]), survival times differed; the probability of survival at 2 years was only about 5% for children treated at 66.0 and 75.6 Gy and was 22% for children treated at 70.2 Gy.

Similarly, 284 children with rhabdomyosarcoma were treated with hyperfractionated EBRT to 59.4 Gy (5940 rad) at 1.1 Gy per fraction, twice daily with a 6- to 8-hour interfraction interval, to assess the toxicity of hyperfractionated radiation combined with chemothera-

5.0 (500)	BID	60.0 (6000)	8	8 (100)

*BID indicates twice daily; QD, daily.

peutic treatment.[32] This was a 10% calculated dose increase of the biologically effective dose over conventional daily fractionation. No deaths or unusual toxic effects were reported in any of the patients treated (0% [0/284]).

Thirty-nine patients with Ewing sarcoma were treated by several different regimens incorporating hyperfractionated EBRT at 1.2 Gy per fraction, twice daily with a 6-hour interfraction interval.[33] Total dose delivered depended on response to chemotherapy and was 50.4 Gy (5040 rad) for complete regression, 55.2 Gy (5520 rad) for 50% resolution, and 60 Gy (6000 rad) for 50% resolution of soft tissue mass. The 5-year local control rate for the 3 different systemic regimens and the hyperfractionated radiosurgery as given in this paragraph was similar at 88% to 92%, indicating improved long-term function as compared with once-a-day standard treatment regimens.

Hyperfractionated EBRT and adjuvant chemotherapy has been used to treat 23 children with medulloblastoma and primitive neuroectodermal tumors.[29] Both the primary site and neuroaxis were treated with 1.0-Gy (100-rad) fractions, twice daily with 4- to 6-hour interfraction intervals. Total dose to the primary tumor and other areas of measurable intracranial disease was 72 Gy (7200 rad). The prophylactic craniospinal dose was 36 Gy (3600 rad), with boosting to metastatic spinal deposits. After radiation treatment, all patients had multiagent chemotherapy. Of 15 patients with high T stages with large locally invasive tumor and no evidence of metastases, 14 were in continuous remission for a median of 78 months. No patient in this group died. Of 4 patients with both high T and M stages, 2 were alive in continuous remission at 69 and 35 months, and 2 died at 18 and 30 months. In 4 patients whose primary site was outside of the cerebellum, 3 of whom had M3 disease, none responded completely to therapy.

The increased efficacy and minimal toxicity demonstrated in these clinical studies and in our laboratory evaluations with the use of hyperfractionated EBRT suggest a possible application in the treatment of pediatric retinoblastoma.

The present study documents that the TCD_{50} for 2.0-Gy EBRT, once daily, was 45.0 Gy in this transgenic murine model of retinoblastoma. In contrast, with the use of 1.2-Gy fractions administered twice per day, a TCD_{50} of 33.0 Gy (3300 rad) was observed, demonstrating the increased efficacy of hyperfractionated EBRT.

Previous experiments in our laboratory have documented the TCD_{50}s and dose-effect curves for transgenic mice treated with clinically relevant EBRT doses.[42,43] The current study further establishes a clear dose-effect relationship of EBRT delivered in hyperfractionation. These results suggest that lowering the fraction per radiation dose from the conventional 1.8 to 2.0 Gy once per day to a fractionated dose of 1.2 Gy twice per day may provide enhanced tumor control, while reducing the overall treatment dose.

In the past 10 years, systemic chemotherapy has largely replaced EBRT in the treatment of medium to large tumors (Reese-Ellsworth stage IV and V).[9] Systemic administration of chemotherapy, as a primary treatment modality, has been used in small to medium-sized tumors to decrease the tumor volume of intraocular retinoblastoma.[44-49] Clinical trials have also demonstrated the benefits of chemoreduction combined with adjuvant therapy.[46,50-52] Although effective in reducing the tumor volume in small to medium-sized tumors, chemoreduction plus local cryotherapy, laser photocoagulation, thermotherapy, or plaque radiation therapy has not proved as effective in the treatment of large tumors (Reese-Ellsworth group 5).[48,53] Recent studies indicate that EBRT is often needed as salvage therapy after failure of systemic chemoreduction management of large retinoblastoma tumors.[48,53] In addition, new reports of patients treated with EBRT indicate lower incidences of second tumor development among long-term survivors of heritable retinoblastoma than previously reported.[5,54] Exter-

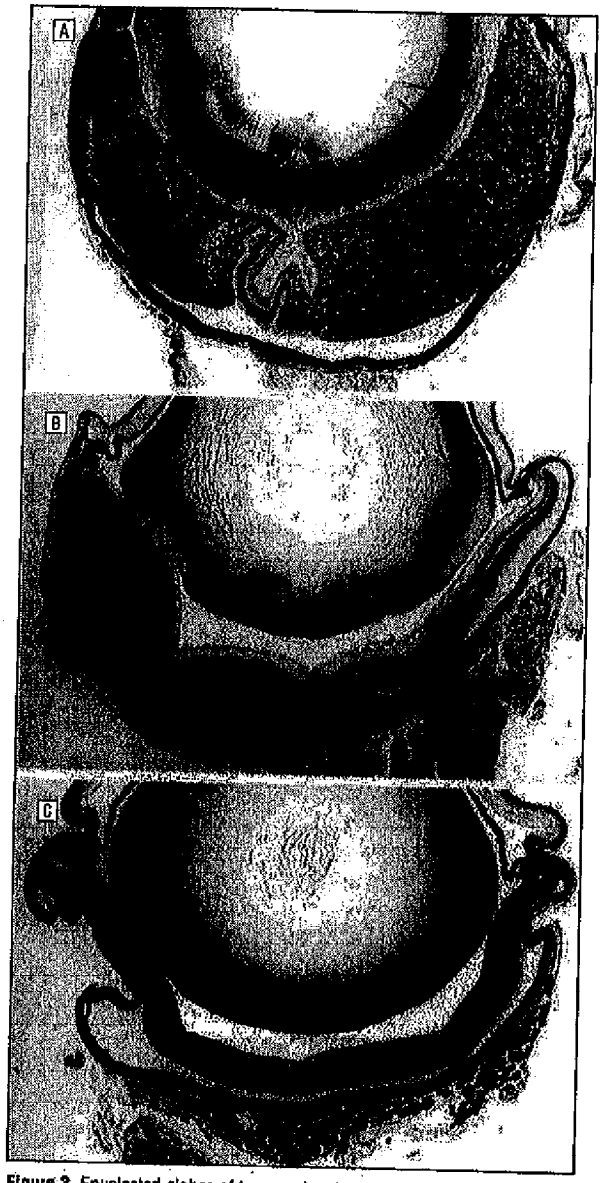

Figure 3. Enucleated globes of transgenic mice after receiving external beam radiotherapy in 2.0-Gy (200-rad) fractions once per day. All eyes were enucleated at 16 weeks of age. A, Eye treated with a total dose of 24.0 Gy (2400 rad). Note that a large tumor is present. B, Eye treated with a total dose of 36.0 Gy (3600 rad). A moderate-sized tumor is present. C, Eye treated with a total dose of 48.0 Gy (4800 rad). Microscopic tumor is present. Note that no evidence of cataract, scleral thinning, corneal decompensation, or retinal abnormality is present (original magnification ×7).

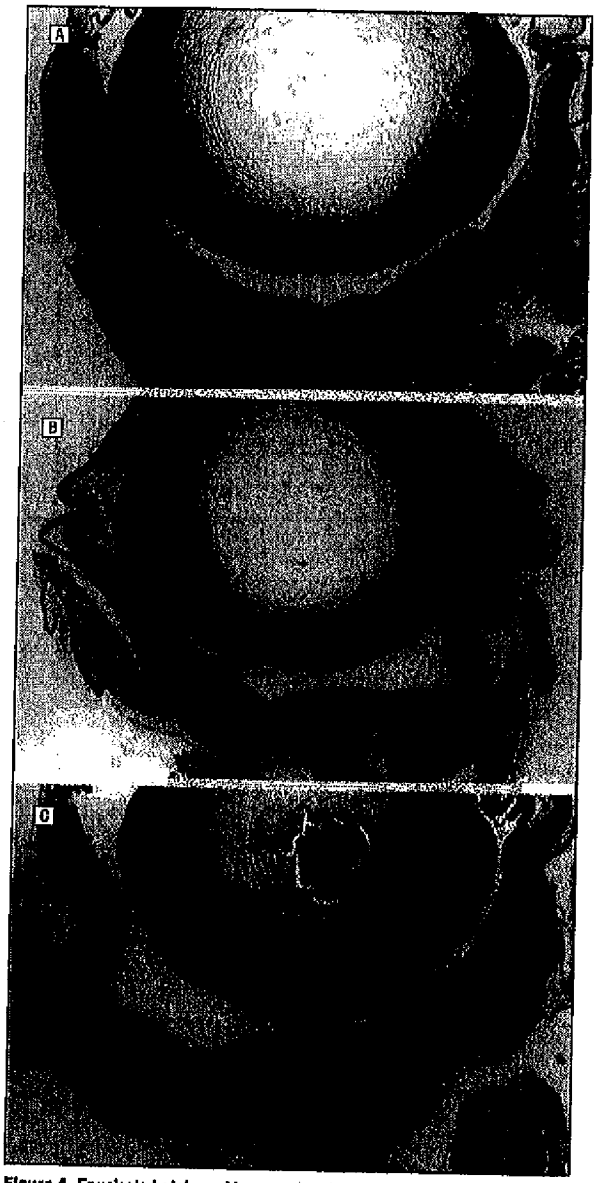

Figure 4. Enucleated globes of transgenic mice after receiving external beam radiotherapy in 1.2-Gy (120-rad) fractions twice per day. All eyes were enucleated at 16 weeks of age. A, Eye treated with a total dose of 24.0 Gy (2400 rad). A small tumor is present. B, Eye receiving a total radiation dose of 33.6 Gy (3360 rad). Note the presence of microscopic tumor. C, Eye treated with a total dose of 48.0 Gy (4800 rad). Complete absence of tumor is demonstrated. No evidence of cataract or other toxic effect is present (original magnification ×7).

nal beam radiation therapy remains a valuable treatment option, particularly in the management of tumors with extensive vitreous seeding, for tumors located near the optic nerve, or after the failure of systemic chemotherapy.

Hyperfractionated radiotherapy may prove most useful in combination with adjuvant therapies, or as salvage therapy for patients who have previously undergone systemic chemotherapy. To decrease the risk of secondary malignancy after chemotherapy treatment, new studies have investigated the local delivery of chemotherapy via subconjunctival injection, peribulbar injection, episcleral balloon delivery, and coulomb-controlled iontophoresis.[42,43,55-58] The use of hyperfractionated EBRT in combination with local chemotherapy may provide effective treatment, while minimizing toxicity and the increased incidence of secondary malignancy.

This study demonstrates improved efficacy of twice- vs once-daily radiotherapy without increased toxicity in

FCSO-12292014-00000439

FAR150615000193 17

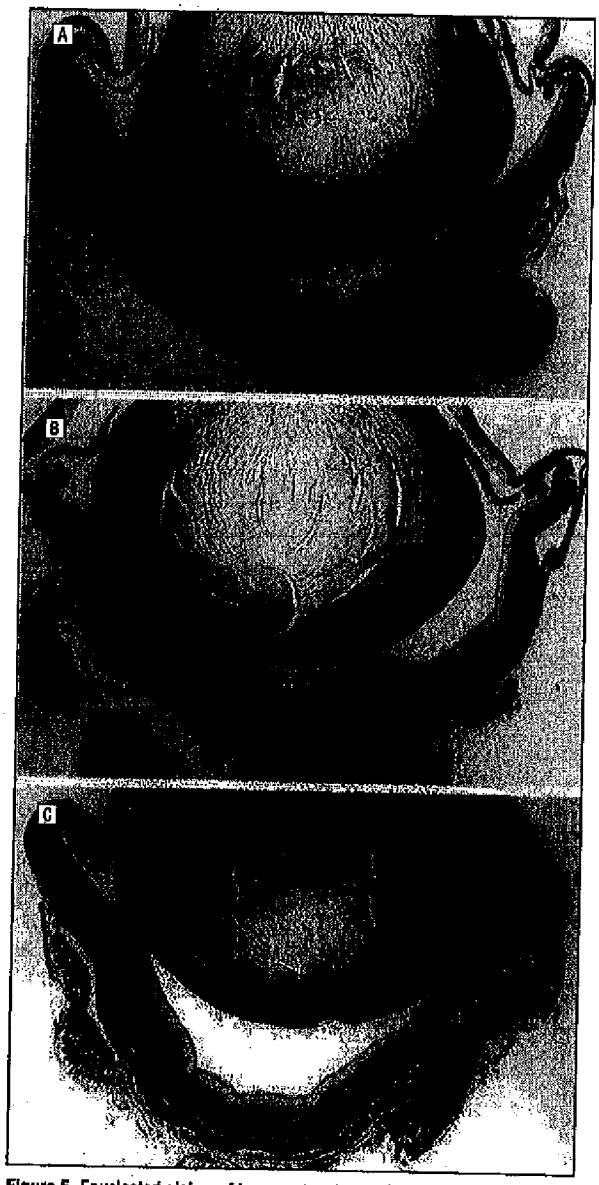

Figure 5. Enucleated globes of transgenic mice after receiving external beam radiotherapy in 5.0-Gy (500-rad) fractions twice per day. All eyes were enucleated at 16 weeks of age. A, Eye treated with a total dose of 20.0 Gy (2000 rad). Note that trace tumor is present. B, Eye treated with a total dose of 30.0 Gy (3000 rad). Note complete absence of tumor. C, Eye treated with a total dose of 50.0 Gy (5000 rad). Note complete absence of tumor. Evidence of cataract, scleral thinning, and corneal decompensation are present (original magnification ×7).

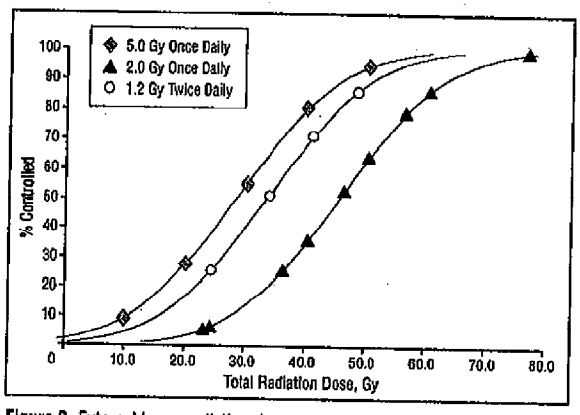

Figure 6. External beam radiation dose-response curves using probit analysis demonstrating the proportion of tumor-containing eyes controlled by fractionated radiation treatments by total treatment dose. Increasing treatment frequency from 2.0 Gy once daily to 1.2 Gy twice daily is associated with increased tumor control with a reduction in the tumor control dose for 50% of eyes. Tumor control can be further increased with the use of 5.0-Gy fractions twice daily; however, this dose is relatively toxic and, therefore, not clinically relevant. To convert gray to rad, multiply by 100.

short-term follow-up within a transgenic murine model of heritable retinoblastoma. Limitations of this study are inherent in the application of animal modeling to human clinical disease. These data establish a framework for pilot clinical evaluation of hyperfractionation in the treatment of childhood retinoblastoma requiring EBRT. Hyperfractionated radiotherapy may offer the benefits of increased tumor control in patients with childhood retinoblastoma, while minimizing the total radiation dose and thus potentially lowering the risk of treatment-related complications.

Documentation of an Encounter Dominated by Counseling or Coordination of Care 48

I. INTRODUCTION

WHAT IS DOCUMENTATION AND WHY IS IT IMPORTANT?

Medical record documentation is required to record pertinent facts, findings, and observations about an individual's health history including past and present illnesses, examinations, tests, treatments, and outcomes. The medical record chronologically documents the care of the patient and is an important element contributing to high quality care. The medical record facilitates:

- **the ability of the physician and other healthcare professionals to evaluate and plan the patient's immediate treatment, and to monitor his/her healthcare over time.**
- **communication and continuity of care among physicians and other healthcare professionals involved in the patient's care;**
- **accurate and timely claims review and payment;**
- **appropriate utilization review and quality of care evaluations; and**
- **collection of data that may be useful for research and education.**

An appropriately documented medical record can reduce many of the hassles associated with claims processing and may serve as a legal document to verify the care provided, if necessary.

WHAT DO PAYERS WANT AND WHY?

Because payers have a contractual obligation to enrollees, they may require reasonable documentation that services are consistent with the insurance coverage provided. They may request information to validate:

- **the site of service;**
- **the medical necessity and appropriateness of the diagnostic and/or therapeutic services provided; and/or**
- **that services provided have been accurately reported.**

II. GENERAL PRINCIPLES OF MEDICAL RECORD DOCUMENTATION

The principles of documentation listed below are applicable to all types of medical and surgical services in all settings. For Evaluation and Management (E/M) services, the nature and amount of physician work and documentation varies by type of service, place of service and the patient's status. The general principles listed below may be modified to account for these variable circumstances in providing E/M services.

1. **The medical record should be complete and legible.**

2. **The documentation of each patient encounter should include:**

   - **reason for encounter and relevant history, physical examination findings, and prior diagnostic test results;**

   - **assessment, clinical impression, or diagnosis;**

   - **plan for care; and**

   - **date and legible identity of the observer.**

3. **If not documented, the rationale for ordering diagnostic and other ancillary services should be easily inferred.**

4. **Past and present diagnoses should be accessible to the treating and/or consulting physician.**

5. **Appropriate health risk factors should be identified.**

6. **The patient's progress, response to and changes in treatment, and revision of diagnosis should be documented.**

7. **The CPT and ICD-9-CM codes reported on the health insurance claim form should be supported by the documentation in the medical record.**

III. DOCUMENTATION OF E/M SERVICES

This publication provides definitions and documentation guidelines for the three key components of E/M services and for visits which consist predominately of counseling or coordination of care. The three *key* components--history, examination, and medical decision making--appear in the descriptors for office and other outpatient services, hospital observation services, hospital inpatient services, consultations, emergency department services, nursing facility services, domiciliary care services, and home services. While some of the text of CPT has been repeated in this publication, the reader should refer to CPT for the complete descriptors for E/M services and instructions for selecting a level of service. Documentation guidelines are identified by the symbol • DG.

The descriptors for the levels of E/M services recognize seven components which are used in defining the levels of E/M services. These components are:

- **history;**
- **examination;**
- **medical decision making;**
- **counseling;**
- **coordination of care;**
- **nature of presenting problem; and**
- **time.**

The first three of these components (i.e., history, examination and medical decision making) are the key components in selecting the level of E/M services. In the case of visits which consist predominantly of counseling or coordination of care, time is the key or controlling factor to qualify for a particular level of E/M service.

Because the level of E/M service is dependent on two or three key components, performance and documentation of one component (eg, examination) at the highest level does not necessarily mean that the encounter in its entirety qualifies for the highest level of E/M service.

These Documentation Guidelines for E/M services reflect the needs of the typical adult population. For certain groups of patients, the recorded information may vary slightly from that described here. Specifically, the medical records of infants,

children, adolescents and pregnant women may have additional or modified information recorded in each history and examination area.

As an example, newborn records may include under history of the present illness (HPI) the details of mother's pregnancy and the infant's status at birth; social history will focus on family structure; family history will focus on congenital anomalies and hereditary disorders in the family. In addition, the content of a pediatric examination will vary with the age and development of the child. Although not specifically defined in these documentation guidelines, these patient group variations on history and examination are appropriate.

A. DOCUMENTATION OF HISTORY

The levels of E/M services are based on four levels of history (Problem Focused, Expanded Problem Focused, Detailed, and Comprehensive). Each type of history includes some or all of the following elements:

- **Chief complaint (CC)**
- **History of present illness (HPI)**
- **Review of systems (ROS) and**
- **Past, family, and/or social history (PFSH).**

The extent of the history of present illness, review of systems, and past, family and/or social history that is obtained and documented is dependent upon clinical judgment and the nature of the presenting problem(s).

The chart below shows the progression of the elements required for each type of history. To qualify for a given type of history all three elements in the table must be met. (A chief complaint is indicated at all levels.)

History of Present Illness (HPI)	Review of Systems (ROS)	Past, Family, and/or Social History (PFSH)	Type of History
Brief	N/A	N/A	*Problem Focused*
Brief Problem	Problem Pertinent	N/A	*Focused Expanded Problem*
Extended	Extended	Pertinent	*Detailed*
Extended	Complete	Complete	*Comprehensive*

- ***DG: The CC, ROS and PFSH may be listed as separate elements of history, or they may be included in the description of the history of the present illness.***

- ***DG: A ROS and/or a PFSH obtained during an earlier encounter does not need to be re-recorded if there is evidence that the physician reviewed and updated the previous information. This may occur when a physician updates his/her own record or in an institutional setting or group practice where many physicians use a common record. The review and update may be documented by:***

    - ***describing any new ROS and/or PFSH information or noting there has been no change in the information; and***

    - ***noting the date and location of the earlier ROS and/or PFSH.***

- ***DG: The ROS and/or PFSH may be recorded by ancillary staff or on a form completed by the patient. To document that the physician reviewed the information, there must be a notation supplementing or confirming the information recorded by others.***

- ***DG: If the physician is unable to obtain a history from the patient or other source, the record should describe the patient's condition or other circumstance that precludes obtaining a history.***

Definitions and specific documentation guidelines for each of the elements of history are listed below.

<u>CHIEF COMPLAINT (CC)</u>
The CC is a concise statement describing the symptom, problem, condition, diagnosis, physician recommended return, or other factor that is the reason for the encounter, usually stated in the patient's own words.

- ***DG: The medical record should clearly reflect the chief complaint.***

HISTORY OF PRESENT ILLNESS (HPI)

The HPI is a chronological description of the development of the patient's present illness from the first sign and/or symptom or from the previous encounter to the present. It includes the following elements:

- **location ,**
- **quality ,**
- **severity,**
- **duration,**
- **timing,**
- **context ,**
- **modifying factors, and**
- **associated signs and symptoms.**

***Brief* and *extended* HPIs are distinguished by the amount of detail needed to accurately characterize the clinical problem(s).**

A *brief* HPI consists of one to three elements of the HPI.

- ***DG: The medical record should describe one to three elements of the present illness (HPI).***

An *extended* HPI consists of at least four elements of the HPI or the status of at least three chronic or inactive conditions.

- ***DG: The medical record should describe at least four elements of the present illness (HPI), or the status of at least three chronic or inactive conditions.***

REVIEW OF SYSTEMS (ROS)

A ROS is an inventory of body systems obtained through a series of questions seeking to identify signs and/or symptoms that the patient may be experiencing or has experienced.

For purposes of ROS, the following systems are recognized:

- **Constitutional Symptoms (eg, fever, weight loss)**
- **Eyes**
- **Ears, Nose, Mouth, and Throat**
- **Cardiovascular**
- **Respiratory**
- **Gastrointestinal**
- **Genitourinary**
- **Musculoskeletal**
- **Integumentary (skin and/or breast)**
- **Neurological**
- **Psychiatric**
- **Endocrine**
- **Hematologic/Lymphatic**
- **Allergic/Immunologic**

A *problem pertinent* ROS inquires about the system directly related to the problem(s) identified in the HPI.

- ***DG: The patient's positive responses and pertinent negatives for the system related to the problem should be documented.***

An *extended* ROS inquires about the system directly related to the problem(s) identified in the HPI and a limited number of additional systems.

- ***DG: The patient's positive responses and pertinent negatives for two to nine systems should be documented.***

A *complete* ROS inquires about the system(s) directly related to the problem(s) identified in the HPI, *plus* all additional body systems.

- ***DG: At least ten organ systems must be reviewed. Those systems with positive or pertinent negative responses must be individually documented. For the remaining systems, a notation indicating all other systems are negative is permissible. In the absence of such a notation, at least ten systems must be individually documented.***

PAST, FAMILY, AND/OR SOCIAL HISTORY (PFSH)

The PFSH consists of a review of three areas:

- **past history (the patient's past experiences with illnesses, operations, injuries and treatments);**
- **family history (a review of medical events in the patient's family, including diseases which maybe hereditary or place the patient at risk); and**
- **social history (an age appropriate review of past and current activities).**

For certain categories of E/M services that include only an interval history, it is not necessary to record information about the PFSH. Those categories are subsequent hospital care, follow-up inpatient consultations and subsequent nursing facility care.

A *pertinent* PFSH is a review of the history area(s) directly related to the problem(s) identified in the HPI.

- ***DG: At least one specific item from any of the three history areas must be documented for a pertinent PFSH.***

A *complete* PFSH is a review of two or all three of the PFSH history areas, depending on the category of the E/M service. A review of all three history areas is required for services that by their nature include a comprehensive assessment or reassessment of the patient. A review of two of the three history areas is sufficient for other services.

- ***DG: At least one specific item from two of the three history areas must be documented for a complete PFSH for the following categories of E/M services: office or other outpatient services, established patient; emergency department; domiciliary care, established patient; and home care, established patient.***

- ***DG: At least one specific item from each of the three history areas must be documented for a complete PFSH for the following categories of E/M services: office or other outpatient services, new patient; hospital observation services; hospital inpatient services, initial care; consultations; comprehensive nursing facility assessments; domiciliary care, new patient; home care, new patient.***

B. DOCUMENTATION OF EXAMINATION

The levels of E/M services are based on four types of examination:

- ***Problem Focused* – a limited examination of the affected body area or organ system.**

- ***Expanded Problem Focused* – a limited examination of the affected body area or organ system and any other symptomatic or related body area(s) or organ system(s).**

- ***Detailed* – an extended examination of the affected body area(s) or organ system(s) and any other symptomatic or related body area(s) or organ system(s).**

- ***Comprehensive* – a general multi-system examination, or complete examination of a single organ system and other symptomatic or related body area(s) or organ system(s).**

These types of examinations have been defined for general multi-system and the following single organ systems:

- **Cardiovascular**
- **Ears, Nose, Mouth, and Throat**
- **Eyes**
- **Genitourinary (Female)**
- **Genitourinary (Male)**
- **Hematologic/Lymphatic/Immunologic**
- **Musculoskeletal**
- **Neurological**
- **Psychiatric**
- **Respiratory**
- **Skin**

A general multi-system examination or a single organ system examination may be performed by any physician, regardless of specialty. The type (general multi-system or single organ system) and content of examination are selected by the examining physician and are based upon clinical judgment, the patient's history, and the nature of the presenting problem(s).

The content and documentation requirements for each type and level of examination are summarized below and described in detail in tables beginning on page 13. In the tables, organ systems and body areas recognized by CPT for purposes of describing examinations are shown in the left column. The content, or individual elements, of the examination pertaining to that body area or organ system are identified by bullets (•) in the right column.

Parenthetical examples "(eg,…)", have been used for clarification and to provide guidance regarding documentation. Documentation for each element must satisfy any numeric requirements (such as "Measurement of *any three of the following seven*...") included in the description of the element. Elements with multiple components but with no specific numeric requirement (such as "Examination of *liver* and *spleen*") require documentation of at least one component. It is possible for a given examination to be expanded beyond what is defined here. When that occurs, findings related to the additional systems and/or areas should be documented.

- ***DG: Specific abnormal and relevant negative findings of the examination of the affected or symptomatic body area(s) or organ system(s) should be documented. A notation of "abnormal" without elaboration is insufficient.***

- ***DG: Abnormal or unexpected findings of the examination of any asymptomatic body area(s) or organ system(s) should be described.***

- ***DG: A brief statement or notation indicating "negative" or "normal" is sufficient to document normal findings related to unaffected area(s) or asymptomatic organ system(s).***

GENERAL MULTI-SYSTEM EXAMINATIONS

General multi-system examinations are described in detail beginning on page 13. To qualify for a given level of multi-system examination, the following content and documentation requirements should be met:

- ***Problem Focused Examination*** **– should include performance and documentation of one to five elements identified by a bullet (•) in one or more organ system(s) or body area(s).**
- ***Expanded Problem Focused Examination*** **– should include performance and documentation of at least six elements identified by a bullet (•) in one or more organ system(s) or body area(s).**
- ***Detailed Examination*** **– should include at least six organ systems or body areas. For each system/area selected, performance and documentation of at least two elements identified by a bullet (•) is expected. Alternatively, a detailed examination may include performance and documentation of at least twelve elements identified by a bullet (•) in two or more organ systems or body areas.**
- ***Comprehensive Examination*** **– should include at least nine organ systems or body areas. For each system/area selected, all elements of the examination identified by a bullet (•) should be performed, unless specific directions limit the content of the examination. For each area/system, documentation of at least two elements identified by a bullet is expected.**

SINGLE ORGAN SYSTEM EXAMINATIONS

The single organ system examinations recognized by CPT are described in detail beginning on page 18. Variations among these examinations in the organ systems and body areas identified in the left columns and in the elements of the examinations described in the right columns reflect differing emphases among specialties. To qualify for a given level of single organ system examination, the following content and documentation requirements should be met:

- ***Problem Focused Examination*** **– should include performance and documentation of one to five elements identified by a bullet (•), whether in a box with a shaded or unshaded border.**
- ***Expanded Problem Focused Examination*** **– should include performance and documentation of at least six elements identified by a bullet (•), whether in a box with a shaded or unshaded border.**
- ***Detailed Examination*** **– examinations other than the eye and psychiatric examinations should include performance and documentation of at least twelve elements identified by a bullet (•), whether in a box with a shaded or unshaded border.**

  Eye and psychiatric examinations should include the performance and documentation of at least nine elements identified by a bullet (•), whether in a box with a shaded or unshaded border.

- ***Comprehensive Examination* – should include performance of all elements identified by a bullet (•), whether in a shaded or unshaded box. Documentation of every element in each box with a shaded border and at least one element in a box with an unshaded border is expected**.

CONTENT AND DOCUMENTATION REQUIREMENTS

General Multi-System Examination

System/Body Area	Elements of Examination
Constitutional	• Measurement of **any three of the following seven** vital signs: 1) sitting or standing blood pressure, 2) supine blood pressure, 3) pulse rate and regularity, 4) respiration, 5) temperature, 6) height, 7) weight (May be measured and recorded by ancillary staff) • General appearance of patient (eg, development, nutrition, body habitus, deformities, attention to grooming)
Eyes	• Inspection of conjunctivae and lids • Examination of pupils and irises (eg, reaction to light and accommodation, size and symmetry) • Ophthalmoscopic examination of optic discs (eg, size, C/D ratio, appearance) and posterior segments (eg, vessel changes, exudates, hemorrhages)
Ears, Nose, Mouth and Throat	• External inspection of ears and nose (eg, overall appearance, scars, lesions, masses) • Otoscopic examination of external auditory canals and tympanic membranes • Assessment of hearing (eg, whispered voice, finger rub, tuning fork) • Inspection of nasal mucosa, septum and turbinates • Inspection of lips, teeth and gums • Examination of oropharynx: oral mucosa, salivary glands, hard and soft palates, tongue, tonsils and posterior pharynx
Neck	• Examination of neck (eg, masses, overall appearance, symmetry, tracheal position, crepitus) • Examination of thyroid (eg, enlargement, tenderness, mass)

System/Body Area	Elements of Examination
Respiratory	• Assessment of respiratory effort (eg, intercostal retractions, use of accessory muscles, diaphragmatic movement) • Percussion of chest (eg, dullness, flatness, hyperresonance) • Palpation of chest (eg, tactile fremitus) • Auscultation of lungs (eg, breath sounds, adventitious sounds, rubs)
Cardiovascular	• Palpation of heart (eg, location, size, thrills) • Auscultation of heart with notation of abnormal sounds and murmurs Examination of: • carotid arteries (eg, pulse amplitude, bruits) • abdominal aorta (eg, size, bruits) • femoral arteries (eg, pulse amplitude, bruits) • pedal pulses (eg, pulse amplitude) • extremities for edema and/or varicosities
Chest (Breasts)	• Inspection of breasts (eg, symmetry, nipple discharge) • Palpation of breasts and axillae (eg, masses or lumps, tenderness)
Gastrointestinal (Abdomen)	• Examination of abdomen with notation of presence of masses or tenderness • Examination of liver and spleen • Examination for presence or absence of hernia • Examination (when indicated) of anus, perineum and rectum, including sphincter tone, presence of hemorrhoids, rectal masses • Obtain stool sample for occult blood test when indicated

System/Body Area	Elements of Examination
Genitourinary	**MALE:** • Examination of the scrotal contents (eg, hydrocele, spermatocele, tenderness of cord, testicular mass) • Examination of the penis • Digital rectal examination of prostate gland (eg, size, symmetry, nodularity, tenderness) **FEMALE:** Pelvic examination (with or without specimen collection for smears and cultures), including • Examination of external genitalia (eg, general appearance, hair distribution, lesions) and vagina (eg, general appearance, estrogen effect, discharge, lesions, pelvic support, cystocele, rectocele) • Examination of urethra (eg, masses, tenderness, scarring) • Examination of bladder (eg, fullness, masses, tenderness) • Cervix (eg, general appearance, lesions, discharge) • Uterus (eg, size, contour, position, mobility, tenderness, consistency, descent or support) • Adnexa/parametria (eg, masses, tenderness, organomegaly, nodularity)
Lymphatic	Palpation of lymph nodes in **two or more** areas: • Neck • Axillae • Groin • Other

System/Body Area	Elements of Examination
Musculoskeletal	• Examination of gait and station • Inspection and/or palpation of digits and nails (eg, clubbing, cyanosis, inflammatory conditions, petechiae, ischemia, infections, nodes) Examination of joints, bones and muscles of **one or more of the following six** areas: 1) head and neck; 2) spine, ribs and pelvis; 3) right upper extremity; 4) left upper extremity; 5) right lower extremity; and 6) left lower extremity. The examination of a given area includes: • Inspection and/or palpation with notation of presence of any misalignment, asymmetry, crepitation, defects, tenderness, masses, effusions • Assessment of range of motion with notation of any pain, crepitation or contracture • Assessment of stability with notation of any dislocation (luxation), subluxation or laxity • Assessment of muscle strength and tone (eg, flaccid, cog wheel, spastic) with notation of any atrophy or abnormal movements
Skin	• Inspection of skin and subcutaneous tissue (eg, rashes, lesions, ulcers) • Palpation of skin and subcutaneous tissue (eg, induration, subcutaneous nodules, tightening)
Neurologic	• Test cranial nerves with notation of any deficits • Examination of deep tendon reflexes with notation of pathological reflexes (eg, Babinski) • Examination of sensation (eg, by touch, pin, vibration, proprioception)
Psychiatric	• Description of patient's judgment and insight Brief assessment of mental status including: • orientation to time, place and person • recent and remote memory • mood and affect (eg, depression, anxiety, agitation)

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least two** elements identified by a bullet **from each of six areas/systems** OR **at least twelve** elements identified by a bullet **in two or more areas/systems**.
Comprehensive	Perform **all elements** identified by a bullet in **at least nine** organ systems or body areas and document **at least two** elements identified by a bullet **from each of nine areas/systems.**

Cardiovascular Examination

System/Body Area	Elements of Examination
Constitutional	• Measurement of **any three of the following seven** vital signs: 1) sitting or standing blood pressure, 2) supine blood pressure, 3) pulse rate and regularity, 4) respiration, 5) temperature, 6) height, 7) weight (May be measured and recorded by ancillary staff) • General appearance of patient (eg, development, nutrition, body habitus, deformities, attention to grooming)
Head and Face	
Eyes	• Inspection of conjunctivae and lids (eg, xanthelasma)
Ears, Nose, Mouth and Throat	• Inspection of teeth, gums and palate • Inspection of oral mucosa with notation of presence of pallor or cyanosis
Neck	• Examination of jugular veins (eg, distension; a, v or cannon a waves) • Examination of thyroid (eg, enlargement, tenderness, mass)
Respiratory	• Assessment of respiratory effort (eg, intercostal retractions, use of accessory muscles, diaphragmatic movement) • Auscultation of lungs (eg, breath sounds, adventitious sounds, rubs)
Cardiovascular	• Palpation of heart (eg, location, size and forcefulness of the point of maximal impact; thrills; lifts; palpable S3 or S4) • Auscultation of heart including sounds, abnormal sounds and murmurs • Measurement of blood pressure in two or more extremities when indicated (eg, aortic dissection, coarctation) Examination of: • Carotid arteries (eg, waveform, pulse amplitude, bruits, apical-carotid delay) • Abdominal aorta (eg, size, bruits) • Femoral arteries (eg, pulse amplitude, bruits) • Pedal pulses (eg, pulse amplitude) • Extremities for peripheral edema and/or varicosities

System/Body Area	Elements of Examination
Chest (Breasts)	
Gastrointestinal (Abdomen)	• Examination of abdomen with notation of presence of masses or tenderness • Examination of liver and spleen • Obtain stool sample for occult blood from patients who are being considered for thrombolytic or anticoagulant therapy
Genitourinary (Abdomen)	
Lymphatic	
Musculoskeletal	• Examination of the back with notation of kyphosis or scoliosis • Examination of gait with notation of ability to undergo exercise testing and/or participation in exercise programs • Assessment of muscle strength and tone (eg, flaccid, cog wheel, spastic) with notation of any atrophy and abnormal movements
Extremities	• Inspection and palpation of digits and nails (eg, clubbing, cyanosis, inflammation, petechiae, ischemia, infections, Osler's nodes)
Skin	• Inspection and/or palpation of skin and subcutaneous tissue (eg, stasis dermatitis, ulcers, scars, xanthomas)
Neurological/ Psychiatric	Brief assessment of mental status including • Orientation to time, place and person, • Mood and affect (eg, depression, anxiety, agitation)

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least twelve** elements identified by a bullet.
Comprehensive	Perform **all** elements identified by a bullet; document every element in each box with a shaded border and at least one element in each box with an unshaded border.

Ear, Nose and Throat Examination

System/Body Area	Elements of Examination
Constitutional	• Measurement of **any three of the following seven** vital signs: 1) sitting or standing blood pressure, 2) supine blood pressure, 3) pulse rate and regularity, 4) respiration, 5) temperature, 6) height, 7) weight (May be measured and recorded by ancillary staff) • General appearance of patient (eg, development, nutrition, body habitus, deformities, attention to grooming) • Assessment of ability to communicate (eg, use of sign language or other communication aids) and quality of voice
Head and Face	• Inspection of head and face (eg, overall appearance, scars, lesions and masses) • Palpation and/or percussion of face with notation of presence or absence of sinus tenderness • Examination of salivary glands • Assessment of facial strength
Eyes	• Test ocular motility including primary gaze alignment
Ears, Nose, Mouth and Throat	• Otoscopic examination of external auditory canals and tympanic membranes including pneumo-otoscopy with notation of mobility of membranes • Assessment of hearing with tuning forks and clinical speech reception thresholds (eg, whispered voice, finger rub) • External inspection of ears and nose (eg, overall appearance, scars, lesions and masses) • Inspection of nasal mucosa, septum and turbinates • Inspection of lips, teeth and gums • Examination of oropharynx: oral mucosa, hard and soft palates, tongue, tonsils and posterior pharynx (eg, asymmetry, lesions, hydration of mucosal surfaces) • Inspection of pharyngeal walls and pyriform sinuses (eg, pooling of saliva, asymmetry, lesions) • Examination by mirror of larynx including the condition of the epiglottis, false vocal cords, true vocal cords and mobility of larynx (Use of mirror not required in children) • Examination by mirror of nasopharynx including appearance of the mucosa, adenoids, posterior choanae and eustachian tubes (Use of mirror not required in children)

System/Body Area	Elements of Examination
Neck	• Examination of neck (eg, masses, overall appearance, symmetry, tracheal position, crepitus) • Examination of thyroid (eg, enlargement, tenderness, mass)
Respiratory	• Inspection of chest including symmetry, expansion and/or assessment of respiratory effort (eg, intercostal retractions, use of accessory muscles, diaphragmatic movement) • Auscultation of lungs (eg, breath sounds, adventitious sounds, rubs)
Cardiovascular	• Auscultation of heart with notation of abnormal sounds and murmurs • Examination of peripheral vascular system by observation (eg, swelling, varicosities) and palpation (eg, pulses, temperature, edema, tenderness)
Chest (Breasts)	
Gastrointestinal (Abdomen)	
Genitourinary	
Lymphatic	• Palpation of lymph nodes in neck, axillae, groin and/or other location
Musculoskeletal	
Extremities	
Skin	
Neurological/ Psychiatric	• Test cranial nerves with notation of any deficits Brief assessment of mental status including • Orientation to time, place and person, • Mood and affect (eg, depression, anxiety, agitation)

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least twelve** elements identified by a bullet.
Comprehensive	Perform **all** elements identified by a bullet; document every element in each box with a shaded border and at least one element in each box with an unshaded border.

Eye Examination

System/Body Area	Elements of Examination
Constitutional	
Head and Face	
Eyes	• Test visual acuity (Does not include determination of refractive error) • Gross visual field testing by confrontation • Test ocular motility including primary gaze alignment • Inspection of bulbar and palpebral conjunctivae • Examination of ocular adnexae including lids (eg, ptosis or lagophthalmos), lacrimal glands, lacrimal drainage, orbits and preauricular lymph nodes • Examination of pupils and irises including shape, direct and consensual reaction (afferent pupil), size (eg, anisocoria) and morphology • Slit lamp examination of the corneas including epithelium, stroma, endothelium, and tear film • Slit lamp examination of the anterior chambers including depth, cells, and flare • Slit lamp examination of the lenses including clarity, anterior and posterior capsule, cortex, and nucleus • Measurement of intraocular pressures (except in children and patients with trauma or infectious disease) Ophthalmoscopic examination through dilated pupils (unless contraindicated) of • Optic discs including size, C/D ratio, appearance (eg, atrophy, cupping, tumor elevation) and nerve fiber layer • Posterior segments including retina and vessels (eg, exudates and hemorrhages)
Ears, Nose, Mouth and Throat	
Neck	
Respiratory	

System/Body Area	Elements of Examination
Cardiovascular	
Chest (Breasts)	
Gastrointestinal (Abdomen)	
Genitourinary	
Lymphatic	
Musculoskeletal	
Extremities	
Skin	
Neurological/ Psychiatric	Brief assessment of mental status including • Orientation to time, place and person • Mood and affect (eg, depression, anxiety, agitation)

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least nine** elements identified by a bullet.
Comprehensive	Perform **all** elements identified by a bullet; document every element in each box with a shaded border and at least one element in each box with an unshaded border.

Genitourinary Examination

System/Body Area	Elements of Examination
Constitutional	• Measurement of **any three of the following seven** vital signs: 1) sitting or standing blood pressure, 2) supine blood pressure, 3) pulse rate and regularity, 4) respiration, 5) temperature, 6) height, 7) weight (May be measured and recorded by ancillary staff) • General appearance of patient (eg, development, nutrition, body habitus, deformities, attention to grooming)
Head and Face	
Eyes	
Ears, Nose, Mouth and Throat	
Neck	• Examination of neck (eg, masses, overall appearance, symmetry, tracheal position, crepitus) • Examination of thyroid (eg, enlargement, tenderness, mass)
Respiratory	• Assessment of respiratory effort (eg, intercostal retractions, use of accessory muscles, diaphragmatic movement) • Auscultation of lungs (eg, breath sounds, adventitious sounds, rubs)
Cardiovascular	• Auscultation of heart with notation of abnormal sounds and murmurs • Examination of peripheral vascular system by observation (eg, swelling, varicosities) and palpation (e.g. pulses, temperature, edema, tenderness)
Chest (Breasts)	[See genitourinary (female)]
Gastrointestinal (Abdomen)	• Examination of abdomen with notation of presence of masses or tenderness • Examination for presence or absence of hernia • Examination of liver and spleen • Obtain stool sample for occult blood when indicated

System/Body Area	Elements of Examination
Genitourinary	**MALE:** • Inspection of anus and perineum Examination (with or without specimen collection for smears and cultures) of genitalia including: • Scrotum (eg, lesions, cysts, rashes) • Epididymides (eg, size, symmetry, masses) • Testes (eg, size, symmetry, masses) • Urethral meatus (eg, size, location, lesions, discharge) • Penis (eg, lesions, presence or absence of foreskin, foreskin retractability, plaque, masses, scarring, deformities) Digital rectal examination including: • Prostate gland (eg, size, symmetry, nodularity, tenderness) • Seminal vesicles (eg, symmetry, tenderness, masses, enlargement) • Sphincter tone, presence of hemorrhoids, rectal masses

System/Body Area	Elements of Examination
Genitourinary (Cont'd)	**FEMALE:** Includes **at least seven of the following eleven** elements identified by bullets: • Inspection and palpation of breasts (eg, masses or lumps, tenderness, symmetry, nipple discharge) • Digital rectal examination including sphincter tone, presence of hemorrhoids, rectal masses Pelvic examination (with or without specimen collection for smears and cultures) including: • External genitalia (eg, general appearance, hair distribution, lesions) • Urethral meatus (eg, size, location, lesions, prolapse) • Urethra (eg, masses, tenderness, scarring) • Bladder (eg, fullness, masses, tenderness) • Vagina (eg, general appearance, estrogen effect, discharge, lesions, pelvic support, cystocele, rectocele) • Cervix (eg, general appearance, lesions, discharge) • Uterus (eg, size, contour, position, mobility, tenderness, consistency, descent or support) • Adnexa/parametria (eg, masses, tenderness, organomegaly, nodularity) • Anus and perineum
Lymphatic	• Palpation of lymph nodes in neck, axillae, groin and/or other location
Musculoskeletal	
Extremities	
Skin	• Inspection and/or palpation of skin and subcutaneous tissue (eg, rashes, lesions, ulcers)
Neurological/ Psychiatric	Brief assessment of mental status including • Orientation (eg, time, place and person) and • Mood and affect (eg, depression, anxiety, agitation)

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least twelve** elements identified by a bullet.
Comprehensive	Perform **all** elements identified by a bullet; document every element in each box with a shaded border and at least one element in each box with an unshaded border.

Hematologic/Lymphatic/Immunologic Examination

System/Body Area	Elements of Examination
Constitutional	• Measurement of **any three of the following seven** vital signs: 1) sitting or standing blood pressure, 2) supine blood pressure, 3) pulse rate and regularity, 4) respiration, 5) temperature, 6) height, 7) weight (May be measured and recorded by ancillary staff) • General appearance of patient (eg, development, nutrition, body habitus, deformities, attention to grooming)
Head and Face	• Palpation and/or percussion of face with notation of presence or absence of sinus tenderness
Eyes	• Inspection of conjunctivae and lids
Ears, Nose, Mouth and Throat	• Otoscopic examination of external auditory canals and tympanic membranes • Inspection of nasal mucosa, septum and turbinates • Inspection of teeth and gums • Examination of oropharynx (eg, oral mucosa, hard and soft palates, tongue, tonsils and posterior pharynx)
Neck	• Examination of neck (eg, masses, overall appearance, symmetry, tracheal position, crepitus) • Examination of thyroid (eg, enlargement, tenderness, mass)
Respiratory	• Assessment of respiratory effort (eg, intercostal retractions, use of accessory muscles, diaphragmatic movement) • Auscultation of lungs (eg, breath sounds, adventitious sounds, rubs)
Cardiovascular	• Auscultation of heart with notation of abnormal sounds and murmurs • Examination of peripheral vascular system by observation (eg, swelling, varicosities) and palpation (pulses, temperature, edema, tenderness)
Chest (Breasts)	
Gastrointestinal (Abdomen)	• Examination of abdomen with notation of presence of masses or tenderness • Examination of liver and spleen
Genitourinary	

System/Body Area	Elements of Examination
Lymphatic	• Palpation of lymph nodes in neck, axillae, groin, and/or other location
Musculoskeletal	
Extremities	• Inspection and palpation of digits and nails (eg, clubbing, cyanosis, inflammation, petechiae, ischemia, infections, nodes)
Skin	• Inspection and/or palpation of skin and subcutaneous tissue (eg, rashes, lesions, ulcers, ecchymoses, bruises)
Neurological/ Psychiatric	Brief assessment of mental status including • Orientation to time, place and person • Mood and affect (eg, depression, anxiety, agitation)

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least twelve** elements identified by a bullet.
Comprehensive	Perform **all** elements identified by a bullet; document every element in each box with a shaded border and at least one element in each box with an unshaded border.

Musculoskeletal Examination

System/Body Area	Elements of Examination
Constitutional	• Measurement of **any three of the following seven** vital signs: 1) sitting or standing blood pressure, 2) supine blood pressure, 3) pulse rate and regularity, 4) respiration, 5) temperature, 6) height, 7) weight (May be measured and recorded by ancillary staff) • General appearance of patient (eg, development, nutrition, body habitus, deformities, attention to grooming)
Head and Face	
Eyes	
Ears, Nose, Mouth and Throat	
Neck	
Respiratory	
Cardiovascular	• Examination of peripheral vascular system by observation (eg, swelling, varicosities) and palpation (eg, pulses, temperature, edema, tenderness)
Chest (Breasts)	
Gastrointestinal (Abdomen)	
Genitourinary	
Lymphatic	• Palpation of lymph nodes in neck, axillae, groin and/or other location

System/Body Area	Elements of Examination
Musculoskeletal	• Examination of gait and station Examination of joint(s), bone(s) and muscle(s)/ tendon(s) of **four of the following six** areas: 1) head and neck; 2) spine, ribs and pelvis; 3) right upper extremity; 4) left upper extremity; 5) right lower extremity; and 6) left lower extremity. The examination of a given area includes: • Inspection, percussion and/or palpation with notation of any misalignment, asymmetry, crepitation, defects, tenderness, masses or effusions • Assessment of range of motion with notation of any pain (eg, straight leg raising), crepitation or contracture • Assessment of stability with notation of any dislocation (luxation), subluxation or laxity • Assessment of muscle strength and tone (eg, flaccid, cog wheel, spastic) with notation of any atrophy or abnormal movements NOTE: For the comprehensive level of examination, all four of the elements identified by a bullet must be performed and documented for each of four anatomic areas. For the three lower levels of examination, each element is counted separately for each body area. For example, assessing range of motion in two extremities constitutes two elements.
Extremities	[See musculoskeletal and skin]
Skin	• Inspection and/or palpation of skin and subcutaneous tissue (eg, scars, rashes, lesions, cafe-au-lait spots, ulcers) in **four of the following six** areas: 1) head and neck; 2) trunk; 3) right upper extremity; 4) left upper extremity; 5) right lower extremity; and 6) left lower extremity. NOTE: For the comprehensive level, the examination of all four anatomic areas must be performed and documented. For the three lower levels of examination, each body area is counted separately. For example, inspection and/or palpation of the skin and subcutaneous tissue of two extremities constitutes two elements.
Neurological/ Psychiatric	• Test coordination (eg, finger/nose, heel/ knee/shin, rapid alternating movements in the upper and lower extremities, evaluation of fine motor coordination in young children) • Examination of deep tendon reflexes and/or nerve stretch test with notation of pathological reflexes (eg, Babinski) • Examination of sensation (eg, by touch, pin, vibration, proprioception) Brief assessment of mental status including • Orientation to time, place and person • Mood and affect (eg, depression, anxiety, agitation)

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least twelve** elements identified by a bullet.
Comprehensive	Perform **all** elements identified by a bullet; document every element in each box with a shaded border and at least one element in each box with an unshaded border.

Neurological Examination

System/Body Area	Elements of Examination
Constitutional	• Measurement of **any three of the following seven** vital signs: 1) sitting or standing blood pressure, 2) supine blood pressure, 3) pulse rate and regularity, 4) respiration, 5) temperature, 6) height, 7) weight (May be measured and recorded by ancillary staff) • General appearance of patient (eg, development, nutrition, body habitus, deformities, attention to grooming)
Head and Face	
Eyes	• Ophthalmoscopic examination of optic discs (eg, size, C/D ratio, appearance) and posterior segments (eg, vessel changes, exudates, hemorrhages)
Ears, Nose, Mouth and Throat	
Neck	
Respiratory	
Cardiovascular	• Examination of carotid arteries (eg, pulse amplitude, bruits) • Auscultation of heart with notation of abnormal sounds and murmurs • Examination of peripheral vascular system by observation (eg, swelling, varicosities) and palpation (eg, pulses, temperature, edema, tenderness)
Chest (Breasts)	
Gastrointestinal (Abdomen)	
Genitourinary	
Lymphatic	

System/Body Area	Elements of Examination
Musculoskeletal	• Examination of gait and station Assessment of motor function including: • Muscle strength in upper and lower extremities • Muscle tone in upper and lower extremities (eg, flaccid, cog wheel, spastic) with notation of any atrophy or abnormal movements (eg, fasciculation, tardive dyskinesia)
Extremities	[See musculoskeletal]
Skin	
Neurological	Evaluation of higher integrative functions including: • Orientation to time, place and person • Recent and remote memory • Attention span and concentration • Language (eg, naming objects, repeating phrases, spontaneous speech) • Fund of knowledge (eg, awareness of current events, past history, vocabulary) Test the following cranial nerves: • 2nd cranial nerve (eg, visual acuity, visual fields, fundi) • 3rd, 4th and 6th cranial nerves (eg, pupils, eye movements) • 5th cranial nerve (eg, facial sensation, corneal reflexes) • 7th cranial nerve (eg, facial symmetry, strength) • 8th cranial nerve (eg, hearing with tuning fork, whispered voice and/or finger rub) • 9th cranial nerve (eg, spontaneous or reflex palate movement) • 11th cranial nerve (eg, shoulder shrug strength) • 12th cranial nerve (eg, tongue protrusion) • Examination of sensation (eg, by touch, pin, vibration, proprioception) • Examination of deep tendon reflexes in upper and lower extremities with notation of pathological reflexes (eg, Babinski) • Test coordination (eg, finger/nose, heel/knee/shin, rapid alternating movements in the upper and lower extremities, evaluation of fine motor coordination in young children)
Psychiatric	

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least twelve** elements identified by a bullet.
Comprehensive	Perform **all** elements identified by a bullet; document every element in each box with a shaded border and at least one element in each box with an unshaded border.

Psychiatric Examination

System/Body Area	Elements of Examination
Constitutional	• Measurement of **any three of the following seven** vital signs: 1) sitting or standing blood pressure, 2) supine blood pressure, 3) pulse rate and regularity, 4) respiration, 5) temperature, 6) height, 7) weight (May be measured and recorded by ancillary staff) • General appearance of patient (eg, development, nutrition, body habitus, deformities, attention to grooming)
Head and Face	
Eyes	
Ears, Nose, Mouth and Throat	
Neck	
Respiratory	
Cardiovascular	
Chest (Breasts)	
Gastrointestinal (Abdomen)	
Genitourinary	
Lymphatic	
Musculoskeletal	• Assessment of muscle strength and tone (eg, flaccid, cog wheel, spastic) with notation of any atrophy and abnormal movements • Examination of gait and station
Extremities	
Skin	
Neurological	

System/Body Area	Elements of Examination
Psychiatric	• Description of speech including: rate; volume; articulation; coherence; and spontaneity with notation of abnormalities (eg, perseveration, paucity of language) • Description of thought processes including: rate of thoughts; content of thoughts (eg, logical vs. illogical, tangential); abstract reasoning; and computation • Description of associations (eg, loose, tangential, circumstantial, intact) • Description of abnormal or psychotic thoughts including: hallucinations; delusions; preoccupation with violence; homicidal or suicidal ideation; and obsessions • Description of the patient's judgment (eg, concerning everyday activities and social situations) and insight (eg, concerning psychiatric condition) Complete mental status examination including • Orientation to time, place and person • Recent and remote memory • Attention span and concentration • Language (eg, naming objects, repeating phrases) • Fund of knowledge (eg, awareness of current events, past history, vocabulary) • Mood and affect (eg, depression, anxiety, agitation, hypomania, lability)

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least nine** elements identified by a bullet.
Comprehensive	Perform **all** elements identified by a bullet; document every element in each box with a shaded border and at least one element in each box with an unshaded border.

Respiratory Examination

System/Body Area	Elements of Examination
Constitutional	• Measurement of **any three of the following seven** vital signs: 1) sitting or standing blood pressure, 2) supine blood pressure, 3) pulse rate and regularity, 4) respiration, 5) temperature, 6) height, 7) weight (May be measured and recorded by ancillary staff) • General appearance of patient (eg, development, nutrition, body habitus, deformities, attention to grooming)
Head and Face	
Eyes	
Ears, Nose, Mouth and Throat	• Inspection of nasal mucosa, septum and turbinates • Inspection of teeth and gums • Examination of oropharynx (eg, oral mucosa, hard and soft palate, tongue, tonsils and posterior pharynx)
Neck	• Examination of neck (eg, masses, overall appearance, symmetry, tracheal position, crepitus) • Examination of thyroid (eg, enlargement, tenderness, mass) • Examination of jugular veins (eg, distention, a, v or cannon a waves)
Respiratory	• Inspection of chest with notation of symmetry and expansion • Assessment of respiratory effort (eg, intercostal retractions, use of accessory muscles, diaphragmatic movement) • Percussion of chest (eg, dullness, flatness, hyperresonance) • Palpation of chest (eg, tactile fremitus) • Auscultation of lungs (eg, breath sounds, adventitious sounds, rubs)
Cardiovascular	• Auscultation of heart with notation of abnormal sounds and murmurs • Examination of peripheral vascular system by observation (eg, swelling, varicosities) and palpation (pulses, temperature, edema, tenderness)
Chest (Breasts)	

System/Body Area	Elements of Examination
Gastrointestinal (Abdomen)	• Examination of abdomen with notation of presence of masses or tenderness • Examination of liver and spleen
Genitourinary	
Lymphatic	• Palpation of lymph nodes in neck, axillae, groin and/or other location
Musculoskeletal	• Assessment of muscle strength and tone (eg, flaccid, cog wheel, spastic) with notation of any atrophy and abnormal movements • Examination of gait and station
Extremities	• Inspection and palpation of digits and nails (eg, clubbing, cyanosis, inflammation, petechiae, ischemia, infections, nodes)
Skin	• Inspection and/or palpation of skin and subcutaneous tissue (eg, rashes, lesions, ulcers)
Neurological/ Psychiatric	Brief assessment of mental status including • Orientation to time, place and person • Mood and affect (eg, depression, anxiety, agitation)

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least twelve** elements identified by a bullet.
Comprehensive	Perform **all** elements identified by a bullet; document every element in each box with a shaded border and at least one element in each box with an unshaded border.

Skin Examination

System/Body Area	Elements of Examination
Constitutional	• Measurement of **any three of the following seven** vital signs: 1) sitting or standing blood pressure, 2) supine blood pressure, 3) pulse rate and regularity, 4) respiration, 5) temperature, 6) height, 7) weight (May be measured and recorded by ancillary staff) • General appearance of patient (eg, development, nutrition, body habitus, deformities, attention to grooming)
Head and Face	
Eyes	• Inspection of conjunctivae and lids
Ears, Nose, Mouth and Throat	• Inspection of teeth and gums • Examination of oropharynx (eg, oral mucosa, hard and soft palates, tongue, tonsils, posterior pharynx)
Neck	• Examination of thyroid (eg, enlargement, tenderness, mass)
Respiratory	
Cardiovascular	• Examination of peripheral vascular system by observation (eg, swelling, varicosities) and palpation (eg, pulses, temperature, edema, tenderness)
Chest (Breasts)	
Gastrointestinal (Abdomen)	• Examination of liver and spleen • Examination of anus for condyloma and other lesions
Genitourinary	
Lymphatic	• Palpation of lymph nodes in neck, axillae, groin and/or other location
Musculoskeletal	
Extremities	• Inspection and palpation of digits and nails (eg, clubbing, cyanosis, inflammation, petechiae, ischemia, infections, nodes)

System/Body Area	Elements of Examination
Skin	• Palpation of scalp and inspection of hair of scalp, eyebrows, face, chest, pubic area (when indicated) and extremities • Inspection and/or palpation of skin and subcutaneous tissue (eg, rashes, lesions, ulcers, susceptibility to and presence of photo damage) in **eight of the following ten** areas: • Head, including the face and • Neck • Chest, including breasts and axillae • Abdomen • Genitalia, groin, buttocks • Back • Right upper extremity • Left upper extremity • Right lower extremity • Left upper extremity NOTE: For the comprehensive level, the examination of at least eight anatomic areas must be performed and documented. For the three lower levels of examination, each body area is counted separately. For example, inspection and/or palpation of the skin and subcutaneous tissue of the right upper extremity and the left upper extremity constitutes two elements. • Inspection of eccrine and apocrine glands of skin and subcutaneous tissue with identification and location of any hyperhidrosis, chromhidroses or bromhidrosis
Neurological/ Psychiatric	Brief assessment of mental status including • Orientation to time, place and person • Mood and affect (eg, depression, anxiety, agitation)

Content and Documentation Requirements

Level of Exam	Perform and Document:
Problem Focused	**One to five** elements identified by a bullet.
Expanded Problem Focused	**At least six** elements identified by a bullet.
Detailed	**At least twelve** elements identified by a bullet.
Comprehensive	Perform **all** elements identified by a bullet; document every element in each box with a shaded border and at least one element in each box with an unshaded border.

C. DOCUMENTATION OF THE COMPLEXITY OF MEDICAL DECISION MAKING

The levels of E/M services recognize four types of medical decision making (straight-forward, low complexity, moderate complexity and high complexity). Medical decision making refers to the complexity of establishing a diagnosis and/or selecting a management option as measured by:

- the number of possible diagnoses and/or the number of management options that must be considered;
- the amount and/or complexity of medical records, diagnostic tests, and/or other information that must be obtained, reviewed and analyzed; and
- the risk of significant complications, morbidity and/or mortality, as well as comorbidities, associated with the patient's presenting problem(s), the diagnostic procedure(s) and/or the possible management options.

The chart below shows the progression of the elements required for each level of medical decision making. To qualify for a given type of decision making, **two of the three elements in the table must be either met or exceeded.**

Number of diagnoses or management options	Amount and/or complexity of data to be reviewed	Risk of complications and/or morbidity or mortality	Type of decision making
Minimal	Minimal or None	Minimal	***Straightforward***
Limited	Limited	Low	***Low Complexity***
Multiple	Moderate	Moderate	***Moderate Complexity***
Extensive	Extensive	High	***High Complexity***

Each of the elements of medical decision making is described below.

NUMBER OF DIAGNOSES OR MANAGEMENT OPTIONS

The number of possible diagnoses and/or the number of management options that must be considered is based on the number and types of problems addressed during the encounter, the complexity of establishing a diagnosis and the management decisions that are made by the physician.

Generally, decision making with respect to a diagnosed problem is easier than that for an identified but undiagnosed problem. The number and type of diagnostic tests employed may be an indicator of the number of possible diagnoses. Problems which are improving or resolving are less complex than those which are worsening or failing to change as expected. The need to seek advice from others is another indicator of complexity of diagnostic or management problems.

DG: *For each encounter, an assessment, clinical impression, or diagnosis should be documented. It may be explicitly stated or implied in documented decisions regarding management plans and/or further evaluation.*

- *For a presenting problem with an established diagnosis the record should reflect whether the problem is: a) improved, well controlled, resolving or resolved; or, b) inadequately controlled, worsening, or failing to change as expected.*

- *For a presenting problem without an established diagnosis, the assessment or clinical impression may be stated in the form of differential diagnoses or as a "possible", "probable", or "rule out" (R/O) diagnosis.*

DG: *The initiation of, or changes in, treatment should be documented. Treatment includes a wide range of management options including patient instructions, nursing instructions, therapies, and medications.*

DG: *If referrals are made, consultations requested or advice sought, the record should indicate to whom or where the referral or consultation is made or from whom the advice is requested.*

AMOUNT AND/OR COMPLEXITY OF DATA TO BE REVIEWED

The amount and complexity of data to be reviewed is based on the types of diagnostic testing ordered or reviewed. A decision to obtain and review old medical records and/or obtain history from sources other than the patient increases the amount and complexity of data to be reviewed.

Discussion of contradictory or unexpected test results with the physician who performed or interpreted the test is an indication of the complexity of data being reviewed. On occasion the physician who ordered a test may personally review the image, tracing or specimen to supplement information from the physician who prepared the test report or interpretation; this is another indication of the complexity of data being reviewed.

DG: *If a diagnostic service (test or procedure) is ordered, planned, scheduled, or performed at the time of the E/M encounter, the type of service, eg, lab or x-ray, should be documented.*

DG: *The review of lab, radiology and/or other diagnostic tests should be documented. A simple notation such as "WBC elevated" or "chest x-ray unremarkable" is acceptable. Alternatively, the review may be documented by initialing and dating the report containing the test results.*

DG: *A decision to obtain old records or decision to obtain additional history from the family, caretaker or other source to supplement that obtained from the patient should be documented.*

DG: *Relevant findings from the review of old records, and/or the receipt of additional history from the family, caretaker or other source to supplement that obtained from the patient should be documented. If there is no relevant information beyond that already obtained, that fact should be documented. A notation of “Old records reviewed” or “additional history obtained from family” without elaboration is insufficient.*

DG: *The results of discussion of laboratory, radiology or other diagnostic tests with the physician who performed or interpreted the study should be documented.*

DG: *The direct visualization and independent interpretation of an image, tracing or specimen previously or subsequently interpreted by another physician should be documented.*

RISK OF SIGNIFICANT COMPLICATIONS, MORBIDITY, AND/OR MORTALITY

The risk of significant complications, morbidity, and/or mortality is based on the risks associated with the presenting problem(s), the diagnostic procedure(s), and the possible management options.

DG: *Comorbidities/underlying diseases or other factors that increase the complexity of medical decision making by increasing the risk of complications, morbidity, and/or mortality should be documented.*

DG: *If a surgical or invasive diagnostic procedure is ordered, planned or scheduled at the time of the E/M encounter, the type of procedure, eg, laparoscopy, should be documented.*

DG: *If a surgical or invasive diagnostic procedure is performed at the time of the E/M encounter, the specific procedure should be documented.*

DG: *The referral for or decision to perform a surgical or invasive diagnostic procedure on an urgent basis should be documented or implied.*

The following table may be used to help determine whether the risk of significant complications, morbidity, and/or mortality is *minimal*, *low*, *moderate*, or *high*. Because the determination of risk is complex and not readily quantifiable, the table includes common clinical examples rather than absolute measures of risk. The assessment of risk of the presenting problem(s) is based on the risk related to the disease process anticipated between the present encounter and the next one. The assessment of risk of selecting diagnostic procedures and management options is based on the risk during and immediately following any procedures or treatment. **The highest level of risk in any one category (presenting problem(s), diagnostic procedure(s), or management options) determines the overall risk.**

TABLE OF RISK

Level of Risk	Presenting Problem(s)	Diagnostic Procedure(s) Ordered	Management Options Selected
Minimal	One self-limited or minor problem, eg, cold, insect bite, tinea corporis	Laboratory tests requiring venipuncture Chest x-rays EKG/EEG Urinalysis Ultrasound, eg, echocardiography KOH prep	Rest Gargles Elastic bandages Superficial dressings
Low	Two or more self-limited or minor problems One stable chronic illness, eg, well controlled hypertension, non-insulin dependent diabetes, cataract, BPH Acute uncomplicated illness or injury, eg, cystitis, allergic rhinitis, simple sprain	Physiologic tests not under stress, eg, pulmonary function tests Non-cardiovascular imaging studies with contrast, eg, barium enema Superficial needle biopsies Clinical laboratory tests requiring arterial puncture Skin biopsies	Over-the-counter drugs Minor surgery with no identified risk factors Physical therapy Occupational therapy IV fluids without additives
Moderate	One or more chronic illnesses with mild exacerbation, progression, or side effects of treatment Two or more stable chronic illnesses Undiagnosed new problem with uncertain prognosis, eg, lump in breast Acute illness with systemic symptoms, eg, pyelonephritis, pneumonitis, colitis Acute complicated injury, eg, head injury with brief loss of consciousness	Physiologic tests under stress, eg, cardiac stress test, fetal contraction stress test Diagnostic endoscopies with no identified risk factors Deep needle or incisional biopsy Cardiovascular imaging studies with contrast and no identified risk factors, eg, arteriogram, cardiac catheterization Obtain fluid from body cavity, eg lumbar puncture, thoracentesis, culdocentesis	Minor surgery with identified risk factors Elective major surgery (open, percutaneous or endoscopic) with no identified risk factors Prescription drug management Therapeutic nuclear medicine IV fluids with additives Closed treatment of fracture or dislocation without manipulation
High	One or more chronic illnesses with severe exacerbation, progression, or side effects of treatment Acute or chronic illnesses or injuries that pose a threat to life or bodily function, eg, multiple trauma, acute MI, pulmonary embolus, severe respiratory distress, progressive severe rheumatoid arthritis, psychiatric illness with potential threat to self or others, peritonitis, acute renal failure An abrupt change in neurologic status, eg, seizure, TIA, weakness, sensory loss	Cardiovascular imaging studies with contrast with identified risk factors Cardiac electrophysiological tests Diagnostic Endoscopies with identified risk factors Discography	Elective major surgery (open, percutaneous or endoscopic) with identified risk factors Emergency major surgery (open, percutaneous or endoscopic) Parenteral controlled substances Drug therapy requiring intensive monitoring for toxicity Decision not to resuscitate or to de-escalate care because of poor prognosis

D. DOCUMENTATION OF AN ENCOUNTER DOMINATED BY COUNSELING OR COORDINATION OF CARE

In the case where counseling and/or coordination of care dominates (more than 50%) of the physician/patient and/or family encounter (face-to-face time in the office or other or outpatient setting, floor/unit time in the hospital or nursing facility), time is considered the key or controlling factor to qualify for a particular level of E/M services.

DG: *If the physician elects to report the level of service based on counseling and/or coordination of care, the total length of time of the encounter (face-to-face or floor time, as appropriate) should be documented and the record should describe the counseling and/or activities to coordinate care.*

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA

CASE NO. 13-24503-CIV-MOORE/MCALILEY

UNITED STATES OF AMERICA and the STATE OF FLORIDA, ex rel. THEODORE A. SCHIFF, M.D.,

Plaintiff,

v.

GARY L. MARDER , D.O.; ALLERGY, DERMATOLOGY & SKIN CANCER CENTER, INC., a Florida corporation, ROBERT I. KENDALL, M.D., and KENDALL MEDICAL LABORATORY, INC., a Florida corporation,

Defendant.

DECLARATION OF MICHAEL STEINBERG, M.D., IN SUPPORT OF THE UNITED STATES' MOTION FOR SUMMARY JUDGMENT

I, Michael Steinberg, M.D., do hereby declare and state:

1. I am Professor and Chair of the Department of Radiation Oncology at the David Geffen School of Medicine at UCLA. I have an active license to practice medicine in the State of California and I am Board Certified in Therapeutic Radiology and a Diplomat of the American Board of Radiology.

2. I received my medical degree from the University of Southern California, School of Medicine in 1976, did my residency in Radiation Oncology at the UCLA Center for the Health Sciences, and was the Chief Resident from 1980 to 1981. I was also a Clinical Fellow in Radiation Oncology with the American Cancer Society.

3. I have written numerous peer reviewed articles and given numerous presentations and lectures in the area of radiation oncology. I have been recognized as a Fellow of the

American College of Radiology (FACR), the American College of Radiation Oncology (FACRO) and the American Society for Radiation Oncology (FASTRO).

4. From 1999 to 2003, I chaired the Joint Economics Committee of the American Society for Radiation Oncology (ASTRO) and the American College of Radiology. From 2003 to 2007, I served on the ASTRO Board of Directors carrying the health policy and healthcare economics portfolio. In 2010, I was elected President of ASTRO and served as the Chairman of the Board in 2012-2013.

5. From 1997 to 2002, I was the radiation oncology representative to the Relative Value Update Committee (RUC) of the American Medical Association (AMA). From 2002 to 2010, I was the radiation oncology representative to the CPT Editorial Committee of the AMA. In that role I developed and edited numerous billing codes and descriptions of associated physician and non-physician work and practice expense for radiation therapy and related medical services and procedures. In the past I have served as an editor for the Coding Guide for radiation oncology and I have written articles about the appropriate use of CPT billing codes for the CPT Assistant, a publication of the AMA.

6. I was asked by the DOJ to offer various opinions regarding the documentation, treatment management and billing of Gary Marder, D.O. relating to radiation oncology services. The statements in this declaration are based upon my investigation, the medical records and related documentation provided to me by the DOJ and Revenue Cycle, Inc. ("RCI") and publicly available information.

7. A copy of the expert report I prepared in this case is attached hereto as Exhibit A.

8. Radiation therapy is an effective treatment modality for squamous and basal cell carcinoma of the skin. In the generally accepted standard of medical care radiation

therapy is utilized in anatomic areas about the face, around eyes, lips, nose and ears, the pretibial area as well as in cases where pathology shows peri-neural invasion or margin positivity after an expert attempt at complete excision. It should be noted that its routine use in anatomic locations outside of these areas (e.g. back, extremities, etc.), even in patients receiving anticoagulation therapy is very uncommon because other treatments of equal efficacy are more convenient, much less costly and less time consuming for the patient.

9. Dr. Marder's routine use of radiation therapy in these locations, not to mention the inappropriate application of twice a day ("BID" or "hyperfractionation") treatment in these cases, varies extremely from accepted medical care for the use of radiation therapy in the treatment of skin cancer. In these cases, such use of radiation therapy are neither medically reasonable or necessary. In addition, the lack of Dr. Marder's proper documentation of the treatment of these patients falls significantly below the standard of care and accepted practice of medicine. It should also be pointed out that the notion that somehow these cases are of such severity to require some out of the ordinary type of treatment such as BID therapy belies the actual clinical presentation of these patients that was documented in the medical record. There was no documentation of poor prognostic factors requiring a variation in treatment approach. Moreover, there is no evidence that the treatment approach of BID treatment for every patient as found in these medical records has improved efficacy over the standard medically accepted treatments of skin cancer. Finally, the use of BID radiation therapy in virtually all of the patients reviewed does not meet generally accepted standard of medical practice and is not medically reasonable or medically necessary.

10. Although the use of BID fractionation radiation treatment is well documented in the peer reviewed literature as a treatment approach in cancers of the internal mucosa of head and neck structures and in inflammatory breast cancer, it is not appropriate for use in the treatment of the skin cancers described in Dr. Marder's patient charts. BID treatment in the treatment of skin cancer would be rare and certainly not applied to even a minority of skin cancer patients seen and treated by a physician using radiation therapy for treatment of this condition. The evidence based peer reviewed literature does not support its use and there are no valid published trials with level 1 evidence to support its use.
11. Moreover, radiobiological principles in the use of BID radiation treatment require a minimum of a 4 hour separation (6 hours is optimal) between treatment fractions. This is based on the well-known radiobiological principles of repair, re-oxygenation, redistribution, and repopulation. Without proper separation of treatment fractions, the radiobiological benefits of BID treatments are not attained. As such, coverage determinations by Medicare and private health insurance companies require that the time of each treatment fraction be accurately documented within the treatment record when BID treatment is given. In the case of Dr. Marder's records, almost all of the patient treatment records recorded the time of the first treatment fraction only. Not only was the time of the second fraction not recorded, the times that were recorded of the first daily treatment were suspiciously identical for each day the treatment was given. In my years of experience in administering radiation therapy to thousands of patients, even with patients having the same scheduled daily treatment time, virtually never would the daily treatments be delivered at the exact same time on each day of treatment as noted in Dr. Marder's charts.

12. It is also noteworthy that the stereotyped treatment technique where all patients received twice a day fractionation to a total of 40 fractions starting with the use of a 3cm treatment cone, then "coning the field down" to a 1 cm cone is not justified in the medical record or in good medical practice. No documentation was present in the record noting tumor shrinkage to warrant the cone down of the radiation field.

13. Also, suspiciously, information reflected in pathology reports often designate tumor sizes larger than the 3 cm cone in many cases. This makes little sense on its face, particularly in the absence of adequate documentation in the patient charts. Precise measurements of the lesions in the patient encounter notes are typically absent. Instead the treatment record and the pathology report document use of a treatment field (cone) smaller than the targeted tumor. Such treatment is significantly below the standard of care, does not meet generally accepted standards of medical practice and is not medically reasonable or necessary.

Quality of Documentation in the Medical Records:

14. All records reviewed fell far below generally acceptable standards of medical documentation for radiation therapy care. The basic standard of care for the safe delivery of radiation therapy requires specific and detailed documentation of all radiation fields including photographs and drawings of the treatment fields noting relationships to various landmarks and to each other when treatment fields are in close juxtaposition.

15. In addition, the standard of care requires precise written documentation of field location, field angles and treatment set up detail, that are unique to each patient, to be documented in the record to insure accurate daily placement of the radiation fields for treatment delivery. This type of documentation happens within a proper process of care at the time

of a formal simulation procedure. Although, simulation codes were billed in each case, no patient specific documentation of the simulation procedure is found in the chart. Such documentation is not only required to bill for the procedure, but it is also required for the accurate and reproducible delivery of radiation treatment as well as for the possible future contingency of the matching of subsequent radiation treatment fields, should the patient later develop new lesions in nearby anatomical sites. The treating physician must proactively prevent overlap of future radiation fields though documentation to meet the accepted standard of care. This failure to document the precise location and technical features of the treatment delivery uniformly found in of all of Dr. Marder's charts reviewed represents a gross deviation from the standard of care.

16. It should be noted that the repetitive and templated nature of the documentation that does exist in the charts calls into question if such documentation occurred relative to a specific patient or was only filled out for the purpose of billing. In this regard, the consistent lack of documentation of treatment response of the tumors in a proper weekly management note did not verify the clinical response that would be required for the coming down (making smaller) of treatment fields that routinely occurred in all patients reviewed. It is not plausible that every patient responded at exactly the same time in the treatment course requiring that the treatment field be made smaller in size at precisely the same delivered dose. Yet, every patient received the exact same treatment. Of interest is that although there was insufficient medical documentation, there was often non-medical documentation describing the billing codes that were claimed to be associated with the treatment.

17. In addition, although there were treatment records in the chart, there was no specific prescription by the physician for each patient. The prescription for radiation is required for proper documentation of radiation therapy care. In a number of charts there were two treatment records for the same treatment area with the more sparsely filled out treatment record appearing to be contemporaneous with the treatment while the purpose of the other treatment records remains in question.

Proper Use of CPT Codes:

18. The highly atypical unbundled use of BID treatment and stereotypical use of a cone down technique seen in Dr. Marder's charts belie common practice and thus the customary and appropriate utilization of the CPT codes for billing in these patients. The frequent and inadequate documentation of simulation (77280), weekly management (77427) and basic physics calculation (77300) fall well below documentation standards allowing for reimbursement by government or private payers. Furthermore, the elements required for documentation of 77427 are routinely absent as is the signature of the treating physician which is required to receive reimbursement.

19. The use of the radiation treatment delivery code 77402 (as well as 77407 and 77412) is entirely inappropriate. As per photos of the treatment device utilized as well as documentation within the patient charts, the treatment device used is a 90kv x-ray machine, and thus by definition, it is an orthovoltage or superficial radiation machine. The CPT coding rules clearly state that one must use the CPT code that most closely resembles or approximates the treatment or procedure rendered. The perverse suggestion that the use of 77402 (as insinuated by the defendant's "expert") is appropriate in these cases because the subtext of the code states "< 5 MeV" does not meet the CPT

requirement to use the highest level of specificity when coding. In this case the appropriate code is clearly 77401: radiation therapy delivery, superficial and/or orthovoltage" which precisely describes the actual equipment used and not 77402, 77407 or 77412. CPT Codes 77402, 77407 and 77412 are used when megavoltage machines such as linear accelerators are used for treatment and never when orthovoltage equipment is utilized for treatment.

20. There is a reimbursement differential that is based on the different practice expense associated with the different equipment and treatment room requirements. The practice expense for the use of orthovoltage is estimated to be less than $150,000 while the practice expense associated with 77402, 77407 and 77412 is over $3,000,000. This differential practice expense is based on differences in the cost of the equipment, shielding, staffing and maintenance of the equipment.

Supervision of Radiation Therapy:

21. CMS rules (Medicare Carriers Manual Part 3- Claims Process Transmittal 1725, Section 2075 XRAY, RADIUM, AND RADIOACTIVE ISOTOPE THERAPY) specifically require on site physician supervision when managing and billing for radiation therapy delivery. The rules go back to the early Medicare regulations. Specifically, the rule requires direct physician supervision. The use of nurse practitioner or physician assistant for supervision does not meet the Medicare requirements for supervision in the case of radiation therapy. This does not relate to professional service, or credentialing of physician extenders, but to the supervision of radiation therapy treatment delivery. CMS has been clear on this issue regarding the need for direct supervision for radiation therapy

delivery over the years. When a physician is not present during treatment delivery, those treatments must not be billed.

22. This review represents the most notable medical, documentation and billing deficits found in the charts reviewed, and is not an exhaustive review of such deficits.

Pursuant to Title 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct and is based upon my personal knowledge this 18 day of March, 2016, in Los Angeles CA.

Memorandum

Michael Steinberg, MD

To: Mark Lavine, Assistant United States Attorney

From: Michael Steinberg, MD MS 10/14/15

Date: October 14, 2015

Re: Gary Marder, DO Case

This memorandum presents my expert opinion regarding appropriateness of treatment, documentation and billing related to patients who received radiation therapy from Gary Marder, DO. I am Professor and Chair of the Department of Radiation Oncology at the David Geffen School of Medicine at UCLA. I have expertise in the treatment of skin cancer. I routinely care for patients with skin cancer and teach resident physicians in training in the proper techniques, methods and patient care processes for the treatment of skin cancer. From 1999 to 2003 I chaired the Joint Economics Committee of the American Society for Radiation Oncology (ASTRO) and the American College of Radiology. From 2003 to 2007 I served on the ASTRO Board of Directors carrying the health policy and healthcare economics portfolio. In 2010 I was elected President of ASTRO and served as the Chairman of the Board in 2012-2013. From 1997 to 2002 I was the radiation oncology representative to the Relative Value Update Committee (RUC) of the American Medical Association (AMA). From 2002 to 2010 I was the radiation oncology representative to the CPT Editorial Committee of the AMA. In that role I developed and edited numerous billing codes and descriptions of associated physician, non-physician work and practice expense for radiation therapy and related medical services and procedures. In the past I have served as an editor for the Coding Guide for radiation oncology and I have written articles about the appropriate use of CPT billing codes for the CPT Assistant, a publication of the AMA.

The following highlights the most salient deficiencies in documentation, treatment management and billing found within the records reviewed, yet are not a complete portrayal of all such deficiencies found within Dr. Marder's medical records.

Appropriateness of Treatment:
Radiation therapy is an effective treatment modality for squamous and basal cell carcinoma of the skin. In the generally accepted standard of medical care radiation therapy is utilized in anatomic areas about the face, around eyes, lips, nose and ears, the pretibial area as well as in cases where pathology shows peri-neural invasion or margin positivity after an expert attempt at complete excision. It should be noted that its routine use in anatomic locations outside of these areas (e.g. back, extremities, etc.), even in patients receiving anticoagulation therapy is very uncommon because other treatments of equal efficacy are more convenient, much less costly and less time consuming for the patient.

Dr. Marder's routine use of radiation therapy in these locations, not to mention the inappropriate application of BID treatment in these cases (see below), varies extremely from accepted medical care for the use of radiation therapy in the treatment of skin cancer.

In these cases such use of radiation therapy are neither medically reasonable or necessary. In addition, the lack of Dr. Marder's proper documentation of the treatment of these patients falls significantly below the standard of care and accepted practice of medicine. It should also be pointed out that the notion that somehow these cases are of such severity to require some out of the ordinary type of treatment such as BID therapy belies the actual clinical presentation of these patients that was documented in the medical record. There was no documentation of poor prognostic factors requiring a variation in treatment approach. Moreover, there is no evidence that the treatment approach of BID treatment for every patient as found in these medical records has improved efficacy over the standard medically accepted treatments of skin cancer. Finally, the use of BID radiation therapy is virtually all of the patients reviewed does not meet generally accepted standard of medical practice and is not medically reasonable or medically necessary.

Although the use of twice a day (BID) fractionation radiation treatment is well documented in the peer reviewed literature as a treatment approach in cancers of the internal mucosa of head and neck structures and in inflammatory breast cancer, it is not appropriate for use in the treatment of the skin cancers described in Dr. Marder's patient charts. BID treatment in the treatment skin cancer would be rare and certainly not applied to even a minority of skin cancer patients seen and treated by a physician using radiation therapy for treatment of this condition. The evidence based peer reviewed literature does not support its use and there are no published trials with level 1 evidence to support its use. Moreover, radiobiological principles in the use of BID radiation treatment require a minimum of a 4 hour separation (6 hours is optimal) between treatment fractions. This is based on the well-known radiobiological principles of repair, re-oxygenation, redistribution, and repopulation. Without proper separation of treatment fractions, the radiobiological benefits of BID treatments are not attained. As such, coverage determinations by Medicare and private health insurance companies require that the time of each treatment fraction be accurately documented within the treatment record when BID treatment is given. In the case of Dr. Marder's records, almost all of the patient treatment records recorded the time of the first treatment fraction only. Not only was the time of the second fraction not recorded, the times that were recorded of the first daily treatment were suspiciously identical for each day the treatment was given. In my years of experience in administering radiation therapy to thousands of patients, even with patients having the same scheduled daily treatment time, virtually never would the daily treatments be delivered at the exact same time on each day of treatment as noted in Dr. Marder's charts.

It is also noteworthy that the stereotyped treatment technique where all patients received twice a day fractionation to a total of 40 fractions starting with the use of a 3cm treatment cone, then coning the field down to a 1 cm cone is not justified in the medical record or in good medical practice. No documentation was present in the record noting tumor shrinkage to warrant the cone down of the radiation field. Also, suspiciously, information reflected in pathology reports often designate tumor sizes larger than the 3 cm cone in many cases. This makes little sense on its face, particularly in the absence of adequate documentation in the patient charts. Precise measurements of the lesions in the patient encounter notes are typically absent. Instead the treatment record and the pathology report document use of a treatment field (cone) smaller than the targeted tumor. Such treatment is significantly below the standard of care, does not meet generally accepted standard of medical practice and is not medically reasonable or necessary.

Quality of Documentation in the Medical Records:
All records reviewed fell far below generally acceptable standards of medical documentation for radiation therapy care. The basic standard of care for the safe delivery of radiation therapy requires specific and and detailed documentation of all radiation fields including photographs and drawings of the treatment fields noting relationships to various landmarks and to each other when treatment fields are in close juxtaposition.

In addition, the standard of care requires precise written documentation of field location, field angles and treatment set up detail, that are unique to each patient, to be documented in the record to insure accurate daily placement of the radiation fields for treatment delivery. This type of documentation happens within a proper process of care at the time of a formal simulation procedure. Although, simulation codes were billed in each case, no patient specific documentation of the simulation procedure is found in the chart. Such documentation is not only required to bill for the procedure, but it is also required for the accurate and reproducible delivery of radiation treatment as well as for the possible future contingency of the matching of subsequent radiation treatment fields, should the patient later develop new lesions in nearby anatomical sites. The treating physician must proactively prevent overlap of future radiation fields though documentation to meet the accepted standard of care . This failure to document the precise location and technical features of the treatment delivery uniformly found in of all of Dr. Marder's charts reviewed represents a gross deviation from the standard of care.

It should be noted that the repetitive and templated nature of the documentation that does exist in the charts calls into question if such documentation occurred relative to a specific patient or was only filled out for the purpose of billing. In this regard, the consistent lack of documentation of treatment response of the tumors in a proper weekly management note did not verify the clinical response that would be required for the coning down (making smaller) of treatment fields that routinely occurred in all patients reviewed. It is not plausible that every patient responded at exactly the same time in the treatment course requiring that the treatment field be made smaller in size at precisely the same delivered dose. Yet, every patient received the exact same treatment. Of interest is that although there was insufficient medical documentation, there was often non-medical documentation describing the billing codes that were claimed to be associated with the treatment.

In addition, although there were treatment records in the chart, there was no specific prescription by the physician for each patient. The prescription for radiation is required for proper documentation of radiation therapy care. In a number of charts there were two treatment records for the same treatment area with the more sparsely filled out treatment record appearing to be contemporaneous with the treatment while the purpose of the other treatment records remains in question.

Proper Use of CPT Codes:
The highly atypical unbundled use of BID treatment and stereotypical use of a cone down technique seen in Dr. Marder's charts belie common practice and thus the customary and appropriate utilization of the CPT codes for billing in these patients. The frequent and inadequate documentation of simulation (77280), weekly management (77427) and basic physics calculation (77300) fall well below documentation standards allowing for reimbursement by government or private payers. Furthermore, the elements required for documentation of 77427 are routinely absent as is the signature of the treating physician which is required to receive reimbursement.

The use of the radiation treatment delivery code 77402 (as well as 77407 and 77412) is entirely inappropriate. As per photos of the treatment device utilized as well as documentation within the patient charts, the treatment device used is a 90kv x-ray machine, and thus by definition, it is an orthovoltage or superficial radiation machine. The CPT coding rules clearly state that one must use the CPT code that most closely resembles or approximates the treatment or procedure rendered. The perverse suggestion that the use of 77402 (as insinuated by the defendant's "expert") is appropriate in these cases because the subtext of the code states "< 5 MeV" does not meet the CPT requirement to use the highest level of specificity when coding. In this case the appropriate code is clearly "77401: radiation therapy delivery, superficial and/or orthovoltage" which precisely describes the actual equipment used and not 77402, 77407 or 77412. 77402, 77407 and 77412 are used when megavoltage machines such as linear accelerators are used for treatment and never when orthovoltage equipment is utilized for treatment.

There is a reimbursement differential that is based on the different practice expense associated with the different equipment and treatment room requirements. The practice expense for the use of orthovoltage is estimated to be less than $150,000 while the practice expense associated with 77402, 77407 and 77412 is over $3,000,000. This differential practice expense is based on differences in the cost of the equipment, shielding, staffing and maintenance of the equipment.

Supervision of Radiation Therapy:
CMS rules (Medicare Carriers Manual Part 3 – Claims Process Transmittal 1725, Section 2075 X-RAY, RADIUM, AND RADIOACTIVE ISOTOPE THERAPY) specifically require on site physician supervision when managing and billing for radiation therapy delivery. The rules go back to the early Medicare regulations. Specifically, the rule requires direct physician supervision. The use of nurse practitioner or physician assistant for supervision does not meet the Medicare requirements for supervision in the case of radiation therapy. This does not relate to professional service, or credentialing of physician extenders, but to the supervision of radiation therapy treatment delivery. CMS has been clear on this issue regarding the need for direct supervision for radiation therapy delivery over the years. When a physician is not present during treatment delivery, those treatments must not be billed.

This review represents the most notable medical, documentation and billing deficits found in the charts reviewed. I am available for further discussion about the magnitude of the deficits in care uncovered in this review.

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA

CASE NO. 13-24503-CIV-MOORE/MCALILEY

UNITED STATES OF AMERICA and the STATE OF FLORIDA, ex rel. THEODORE A. SCHIFF, M.D.,

Plaintiff,

v.

GARY L. MARDER , D.O.; ALLERGY, DERMATOLOGY & SKIN CANCER CENTER, INC., a Florida corporation, ROBERT I. KENDALL, M.D., and KENDALL MEDICAL LABORATORY, INC., a Florida corporation,

Defendant.

DECLARATION OF RON DIGIAIMO IN SUPPORT OF THE UNITED STATES' MOTION FOR SUMMARY JUDGMENT

I, Ron DiGiaimo, do hereby declare and state:

1. I am the President and CEO of Revenue Cycle Inc. ("RCI"), based in Austin, TX.

2. I have over 22 years of experience in the radiation oncology arena. I am very familiar with all aspects of reimbursement, operations, development, documentation and consulting in the field for both hospital and free-standing radiation oncology centers.

3. I am the primary author and contributing editor for the annual American College of Radiation Oncology Practice Management Guide 2004-2015.

4. RCI is the preferred auditing and consulting firm of the American College of Radiation Oncology.

5. I received a Master of Business Administration from Oklahoma Christian University in Edmond, OK, a Bachelor of Science in Health Services Administration from Weber State University in Ogden UT and an Associate of Applied Science in Radiologic Technology from McLennan Community College, Waco, TX.

6. I am a former Radiation Therapist, having trained at the Allen Shivers Radiation Therapy School in Austin, TX.

7. I have published multiple articles and have lectured frequently regarding coding, reimbursement and documentation of radiation therapy services.

8. I have been asked by the DOJ to perform a review of medical records and associated billing records for patients indicated as receiving superficial radiation treatments for skin cancers.

9. The statements in this declaration are based upon my investigation, information provided to me by the DOJ, publicly available information, and my review of business records.

10. The underlying methodology utilized in performing the foregoing services is set forth in detail in the expert report I prepared in this case, a copy of which is attached hereto as Exhibit 1.

11. The DOJ provided me with medical records relating to 43 patients together with the data reflecting the corresponding claims billed to and paid by Medicare, as well as certain other related information such as calendar information indicating days on which Dr. Marder was not in the office.

General Concepts

12. The findings were very similar among the charts reviewed. In general, there was minimal information documenting the actual administration of the treatments. There was also minimal and in the majority of the medical records, no documentation, located for the additional services typically performed in preparation for radiation treatments.

13. My review of these charts raised extremely serious concerns regarding a basic concept in radiation known as reproducibility. There are several reasons that reproducibility is critically important in radiation oncology. In particular, the documentation needs to be sufficient to allow the administration of the radiation to the precisely intended location on multiple days even if different personnel are administering the treatment, and the documentation needs to be sufficient to allow the precise area of treatment to be identified in the even that treatment in a nearby or overlapping region become necessary in the future.

14. The missing, incomplete, and cloned documentation found throughout these medical records do not support reproducibility for patient set up and create material concerns should the patient have a recurrence near or in the area previously treated. Photographs of the lesions along with the delineated treatment area were not present for review as is the standard of care in this field. In addition, there were an unusually high number of treatments per patient. Given the unusually high use of multiple treatments in a day, exact positioning and reproducibility is critical.

15. In addition, the standard of care in Radiation Oncology requires 4-6 hours of time in between each fraction of radiation. The time of the second treatments are not documented in a large number of patients. Dr. Michael Steinberg, Chair of Radiation Oncology at UCLA as well as past Chairman of the world's largest Radiation Oncology specialty group, American Society

of Therapeutic Radiology has specific clinical concerns with the lack of specificity and reproducibility of the correct lesion and area.

16. Throughout the medical records reviewed, preprinted forms indicating that new fields were necessary due to "tumor shrinkage" were found. Additionally, within the radiation records no specific medical necessity documentation other than the cloned statements supporting and illustrating the shrinkage was found in patient's records. There is no documented unique justification of new cones and fields, nor are there any pictures of the new fields and tumor illustrating decreased size. Both of these components of documentation are an absolute necessity and extreme basic requirement for documentation and billing justification. Dosage calculations and physics review are questionably present or non-existent. In addition, actual or potential fabrication of records appears to be present in the review.

17. Another issue seen in this medical record review focused on verification of physician presence in the clinic with regard to the billable services under the physician's name and NPI. The medical record review, which for example revealed that physician's signatures were routinely undated, together with the calendar information provided regarding the physician schedule and vacation time, it appeared that radiation services were routinely rendered and billed without the required physician supervision. This supervision requirement is detailed within the Medicare Carriers Manual Part 3 – Claims Process Transmittal 1725, Section 2075. Additional findings also revealed that services were billed under Dr. Marder's NPI; however, the medical records supported many of these services were performed and documented by a different provider.

CPT Code 77261 - Clinical Treatment Planning

18. CPT Code 77261 is used to bill for Clinical Treatment Planning. This is the plan of care for the patient and must be documented by the physician. This plan should include the medical necessity of the treatments, the prescription and any orders for additional items.

19. Documentation of the services billed under 77261 were not consistently located. References to the radiation treatments located in the evaluation and management notes did not support this service as those notes were only recommendations which failed to indicate the actual prescription. In addition, these notes were a component of the evaluation and management notes, which were billed and paid separately.

20. Some files did contain a "Treatment Prescription Sheet,", but this document failed to include a prescription for each area treated. These sheets also stated that the patient was to initially receive 25 fractions and that on a later date 15 more fractions were added for a total of 40 fractions.

21. On all of these forms, there was also a notation to start with a 3cm cone and then at the time the 15 fractions were added to switch to a 1cm cone due to tumor shrinkage. The verbiage was identical for every patient that this form was located in their medical record. Due to the verbiage remaining the same, this is considered cloned information and does not support individual patient's medical necessity.

22. Some files containing documents that the patient was to initially receive 25 fractions as just described also had other documents indicating that the patient was to initially receive 40 fractions. These contradictory documents suggest that the materials were cloned and were not reflective of the treatment rendered to the patients.

23. One patient reviewed had an indication that they had actually received 54 treatments, but both items detailing the prescription only indicated 40 treatments.

24. Additionally, the "tumor shrinkage" indicated on all of these forms was not documented anywhere else in the medical record.

CPT Code 77280 – Simulation

25. CPT Code 77280 is used to bill for a Simulation which is a process conducted to establish the treatment area for the patient. This process is documented with extensive detail, as it will be used to set the patient up on a daily basis to ensure radiation is only delivered to the area in which it is prescribed. This reproducibility is also important to ensure all normal tissues are protected. In the event the patient is treated again, this information will ensure future treatment fields do not overlap resulting in overtreatment to any areas.

26. Simulation documentation is not located in the majority of the charts provided. In a small number of the charts, a simulation document was located; however, the information appeared to be created in an effort to support a billable charge versus providing clinically relevant information regarding the set-up of the patient. In reviewing the information located on this form, it appears cloned when comparing it to each instance it is present. Furthermore, the information on the form does not provide critical information regarding the set-up of the patient. Without this critical information, a patient could not be placed in a reproducible position for daily radiation treatments using the information provided on this form. The position of the patient, the placement and location of immobilization and treatment devices were not apparent on any form. There were no pictures or photographs illustrating the set up and delineated treatment areas as is standard in the field of radiation oncology.

CPT Codes 77332 and 77334 - Treatment Devices.

27. CPT Codes 77332 and 77334 are used to bill for Treatment Devices. Treatment devices may be utilized for immobilization, beam shaping and/or shielding. These devices are typically fabricated during the Simulation process. When devices are utilized, the method in which they are used, the placement, etc. are thoroughly documented as well as photographed so no errors in set-up are likely. Again, the reproducibility is imperative to ensure proper treatments.

28. Devices may be fabricated specifically for the individual patient and not utilized on any other patient. When this occurs the devices would apply to the patient for which they were created. There are also devices that are pre-fabricated but could be appropriate for the course prescribed and meet the needs of the patient. These are simple devices.

29. Regardless of the type of treatment device, very specific documentation regarding the treatment device, how it is utilized, and the placement of the treatment device and photographs of the treatment device in place are standard of care. This documentation also ensures the patient may be positioned correctly for each fraction as well as provide reproducibility in the event the patient receives future treatments to the same or a nearby area.

30. Treatment devices were routinely billed for the patients reviewed; however, minimal documentation was located. In the few medical records where a treatment device form was located, the information was not patient specific and no photographs were included. The information that was included on the forms that were found was cloned because it was identical from patient to patient.

31. There are also instances when a treatment device form was located indicating devices were utilized, however, contradictory choices in the treatment record were seen as "No" was circled in the area indicating whether the treatment device was utilized or not.

CPT Code 77300 – Calculations of Dosage

32. CPT Code 77300 is used to bill for Calculations of the radiation dose. For superficial radiation treatments, calculations are performed to determine the amount of time needed for the treatment machine to deliver the prescribed dose of radiation. In performing these calculations, the desired dose must be indicated, the current output of the machine must be known and the field size, i.e. cone size, must be determined.

33. Additionally, if any shielding or blocking is present to reduce the field size further in order to protect healthy tissue, this blocked area should be documented with a picture or diagram so the operator knows where to place that block with every treatment. This blocked area may affect the calculated treatment time.

34. Using all these input factors, the calculation is performed and entered into the medical record so that the treating clinician can enter the correct time for each fraction of therapy. This time setting should then be entered into the treatment chart each time to record the total delivery and administration of the dose. The actual dose is also entered into the treatment card so a running total patient dose can be maintained.

35. If at any time, the cone size is changed or reduced, a new calculation is necessary, as the time setting to achieve the desired dose will also change. When this occurs, documentation is necessary as well as the entry of the new time setting in the treatment card to ensure the correct dose is recorded.

36. In the records reviewed, documentation of a calculation was not located except in a minority of the cases. When documentation was located, it only contained one entry that differed from patient to patient. The area denoted for the "Site/Location" was filled in with the treatment area; however, all other information remains the same including the treatment time. These identical entries could only be accurate if all areas treated were the same size, and required the exact same dose, cone size and did not contain any additional or differing shielding.

37. In some of the patient records reviewed where documentation was located for the dose calculations, there were instances where the date of service did not reflect a date consistent with the treatment course. This finding leads to the assumption that the cloned information for calculations was utilized repeatedly and only the date and patient name and lesion site was changed. Specific examples of this finding are provided in my report. When this was identified, the consistent date found on the document was 10/2/12 even though the patient's calculations were indicated as and billed on other dates. This illustrates no new work was performed unique to the particular patient's needs. The actual dates of the calculations would have occurred in 2011, 2012 or 2013 per each case identified.

CPT Code 77401 - Treatment Delivery of Superficial Radiation

38. CPT Code 77401 is used to billed for Treatment Delivery of Superficial Radiation. This code was evaluated both as to the question of whether it was the appropriate CPT Code to use for the services reviewed, and also as to the question of whether the charts contained sufficient documentation of the delivery of the radiation treatment.

39. The only applicable treatment level code for superficial/ortho-voltage treatment is 77401. The use of 77402, 77407 or 77412 is inappropriate due to the coding requirements that state to report the code that most closely represents the service delivered. Those higher level

codes are reimbursed at a higher rate due to the additional expense necessary to provide those services that are not present in this facility, and therefore not applicable.

40. The inappropriate treatment codes used for billing for the radiation were only one of several examples found throughout the medical records and associated billing and reimbursement amounts of practices that fit the definition of abuse. Per CMS, "Abuse describes practices that, either directly or indirectly, result in unnecessary costs to the Medicare Program. Abuse includes any practice that is not consistent with the goals of providing patients with services that are medically necessary, meet professionally recognized standards, and priced fairly. Examples of Medicare abuse include: billing for services that were not medically necessary; charging excessively for services or supplies; and misusing codes on a claim, such as up coding or unbundling codes."

41. My report includes a chart on page two showing the values of the Practice Expense portion of the treatment delivery codes. The Practice Expense portion of the treatment delivery codes is based upon the cost of the equipment required to render the services. The higher the value of the Practice Expense, the higher the cost of the treatment and the higher the reimbursement. The chart shows that the Practice Expense values for 77401 ranged from .53 to .64 between 2012 and 2015. In contrast, the Practice Expense values for 77402, 77407 and 77412 reach as high 7.51, well more than ten times as high. The huge differential in the practice Expense values shows that it is absolutely not possible for the superficial/ortho-voltage reimbursement to have been intended to have been based on anything but 77401.

42. In addition, in order to accurately record the administration of radiation treatments in the medical record (whether billed under 77401 as was appropriate, or under one of the other codes), the clinician delivering the radiation dose will complete the recording of the information

within the patient's medical record. This recording of the procedure documents the treatment occurred and also records the necessary settings, dose, date, etc. The treatment cards for radiation are preprinted enabling ease of entry when charting the procedure. All areas should be completed by the operator.

43. In many of the documents in the reviewed medical charts, the majority of the treatment cards were left blank creating numerous concerns about accuracy of treatment, reproducibility of treatment, actual treatment delivery, complete delivery of treatment, and BID time spacing. The concerns all contribute to non-justification of complete medical necessity documentation at best and potential fabrication of delivery at worse.

44. The proper charting of the administered treatment into the medical record was not located in any records provided for the review. While a portion of the records contained the dose entry, no record contained the time setting for the machine which would correspond to the calculation utilized to deliver the desired dose. Furthermore, most of the patients reviewed required the utilization of a smaller cone due to stated tumor shrinkage. When this occurs, the time setting would change based upon the calculation. In review of the treatment records, this change in time and cone size is not entered into the treatment card. If the treatment time, dose and field parameters are left blank, it cannot be confirmed that a treatment was delivered and if it did occur, what dose was provided or if a complete dose was delivered.

CPT Code 77336 - Continuing Physics

45. CPT Code 77336 is used to bill for Continuing Physics which describes the ongoing support and work of the medical physicist on behalf of each patient under treatment. This service reimburses for the quality assurance the physicist provides to each patient while undergoing radiation treatments. This work includes the calibration of the equipment, the

confirmation of the accuracy of the calculations and the factors contained within the calculation including the output, effective field size, etc.

46. This work also includes the ongoing quality checks of the charting of the radiation treatments as well as the charting of all the treatment parameters within the patient's record, including dose and total dose delivered per lesion as well as adherence to prescribed dose.

47. This service was not clearly documented within the patient's record. What could potentially support the billing of this service are the physicist's initials in the far right hand column in the treatment card, placed during his/her physical visit to the site in the area designated for this service. By initialing on the line that corresponds to the date of the treatment recorded on that line, the physicist is indicating that the all the areas have been checked for accuracy and charted appropriately and that he/she physically reviewed each patient's medical record in detail and guided to completeness and correctness of treatment delivery. The lack of time and completeness of the necessary information on the treatment cards indicates that no on-going qualified physicist was on site weekly to make corrections.

48. The initials of a physicist do not appear in the majority of the records, but when they are present, they appear to have been photocopied onto the page. This appearance of altered documentation is seen frequently and is included in many screenshots throughout my report.

49. Another item located in the medical charts is a separate form designated for this service which contains all the different parameters the physicists would check; however, this form only contains a single signature and not a signature for each of the multiple dates on the form. In addition, the areas noted as completed appear to be routinely indicated on the form since it is assumed if this work was performed, the medical record would be filled out more thoroughly and include the areas noted by the physicist as correct.

CPT Code 77427 - Physician Treatment Management

50. CPT Code 77427 is used to bill for Physician Treatment Management. This service describes the ongoing management of the patient while undergoing radiation treatments. This procedure may be billed once per each 5 fractions when the work is performed and documented. This physician management service includes a minimum of at least one face-to-face visit with the patient during each 5 fractions as well as monitoring of all the daily treatments, set-up of patient, managing of side effects, verification of completeness of documentation and all other items related to medical necessity.

51. In the charts reviewed, this service was not found to be documented consistently. When documentation was located, it did not meet the requirements of this service. Two items were considered when determining documentation presence; first was the presence of the physician's initial in the far right hand column of the record and second was the presence of a separate form for this service. As with the continuing physics, the initials in the far right hand column appear to be altered at a later date by photocopying, therefore, not considered appropriate for this service. The separate form does not contain a physician signature nor does it include the documentation of the face-to-face visit.

Miscellaneous Information

52. Second-hand equipment that can administer superficial radiation is available for approximately $15,000 and new equipment is available for approximately $150,000.

53. The type of equipment powerful enough to generate radiation of 5MeV (5,000,000 electron volts) is known as a linear accelerator, or "linac" for short. For safety purposes, linacs are installed in concrete bunkers to provide shielding and cost between $2 million and $4 million, or even more.

54. A chart showing the amounts "allowed" by Medicare for the CPT Codes at issue in this case for Port St. Lucie County is attached hereto as Exhibit 2. A chart showing the amounts "allowed" by Medicare for the CPT Codes at issue in this case for Okeechobee County is attached hereto as Exhibit 3. The amount ultimately paid by Medicare is 80% of the amounts shown in the chart because 20% of the "allowed" amount is owed by the beneficiary as a co-payment.

Pursuant to Title 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct and is based upon my personal knowledge this 23rd day of March, 2016, in Austin, TX.

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF FLORIDA

CASE NO. 13-24503-CIV-MOORE/MCALILEY

UNITED STATES OF AMERICA and the STATE OF FLORIDA, ex rel. THEODORE A. SCHIFF, M.D.,
Plaintiff,
v.
GARY L. MARDER , D.O.; ALLERGY, DERMATOLOGY & SKIN CANCER CENTER, INC., a Florida corporation, ROBERT I. KENDALL, M.D., and KENDALL MEDICAL LABORATORY, INC., a Florida corporation,
Defendant.

DECLARATION OF MICHAEL PETRON IN SUPPORT OF THE UNITED STATES' MOTION FOR SUMMARY JUDGMENT

I, **MICHAEL J. PETRON**, state the following:

1. I am a Managing Director with Stout Risius Ross, Inc. ("SRR"), a global financial advisory firm that specializes in Investment Banking, Valuation & Financial Opinions, and Dispute Advisory & Forensic Services. I am a Certified Public Accountant licensed in the state of Virginia and a Certified Fraud Examiner. My business address is 1100 Connecticut Avenue NW, Suite 825, Washington, DC 20036.

2. For the past 15 years, my practice has involved consulting with clients regarding the financial, accounting, and statistical aspects of matters primarily in litigation, in anticipation of litigation, or during investigations. I have testified as an expert witness on statistical issues, damages, forensic accounting, asset forfeiture, restitution, and loss. My experience includes various statistical analyses, forensic accounting investigations, damages or loss determinations,

and ability-to-pay analyses.

3. I have written articles and given presentations on accounting and statistical related issues. I have given numerous training sessions to attorneys, special agents of the Federal Bureau of Investigation and the Department of Health and Human Services' Office of Inspector General ("OIG"), and other federal and local law enforcement personnel on sampling, advanced data analysis, and fraud detection at various United States Attorney's offices across the country. I received an Award for Excellence by the Council of Inspectors General on Integrity and Efficiency for my contributions to the joint Department of Justice ("DOJ") and OIG Advanced Data Intelligence and Analytics Team. I have also received a Special Commendation from the DOJ's Civil Division for my contributions to the Medicare Outlier Analysis Group.

4. I was asked by the DOJ to develop and implement a sampling methodology that would estimate the amount of Medicare overpayment damages related to certain Radiation Oncology procedures billed by Dr. Gary L. Marder D.O. ("Dr. Marder").

5. I was also asked to estimate the statutory fines related to the claims submitted by Dr. Marder, and to provide various statistics that summarize the historical billings by Dr. Marder.

6. The statements in this declaration are based upon my investigation, information provided to me by the DOJ, publicly available information, and my review of business records.

7. The underlying methodology utilized in performing the foregoing services is set forth in detail in the expert report I prepared in this case, a copy of which, together with Exhibits, is attached hereto as Exhibit A.

MEDICARE OVERPAYMENT DAMAGES

8. I estimated the overpayment damages to the Medicare Program through the use of a random sample. I selected 44 of the 249 beneficiaries contained in the claims data identified in Exhibit 2 to my report as *Marder Raw Data.xlsx* for which the total paid amount for Radiation Oncology related procedures equal to or greater than $10,000.00. Radiation Oncology related procedures are defined by Current Procedural Terminology ("CPT") codes 77261, 77280, 77300, 77332, 77334, 77336, 77427, 77401, 77402, 77407, or 77412.

9. I produced a list of the 44 beneficiaries to the DOJ and it is my understanding that DOJ obtained the medical charts for 43 of the 44 beneficiaries for Revenue Cycle Inc.(" RCI") to review. After RCI completed its review, they provided an Excel file containing a summary of their findings, and I relied on the summary in order to estimate overpayment damages.

10. RCI determined if each procedure in the sample was either billed correctly or incorrectly, or if additional information was needed to reach a conclusion, RCI conditionally categorized the procedure as "maybe" incorrect.

11. I calculated two separate estimates of overpayment damages based upon the findings of RCI. One estimate treated the procedures in the "maybe" category as **not** representing overpayment damages for estimation purposes, and the other estimate treated the procedures in the "maybe" category as representing overpayment damages for estimation purposes.

12. The final overpayment damages estimate related to Dr. Marder's Radiation Oncology procedures if the procedures in the "maybe" category are **not** treated as representing overpayment damages for estimation purposes is $7,637,015 with a corresponding 95% confidence interval of $6,207,475 to $9,066,555. The precision percent achieved in the overall sample was 18.7% and this falls within generally acceptable statistical practice.

13. The final overpayment damages estimate related to Dr. Marder's Radiation Oncology procedures if the procedures in the "maybe" category are treated as representing overpayment damages for estimation purposes is $8,723,910 with a corresponding 95% confidence interval of $7,388,742 to $10,059,080. The precision percent achieved in this case increases to 15.3% and falls within generally acceptable statistical practice.

14. The overpayment damages estimates are conservative due to the exclusion of beneficiaries with total paid Radiation Oncology related procedures of less than $10,000.

STATUTORY FINES

15. I was also asked by the DOJ to estimate the statutory fines related to the allegations in this matter. I utilized the same RCI review and created a summary by beneficiary of each claim found in the sample.

16. If the procedures in the "maybe" category as treated as **not** representing overpayment damages for estimation purposes, the minimum statutory fine is estimated to be $15,306,500 which is derived from multiplying the statutory rate of $5,500 per claim to the 2,783 claims estimated from the full sample to be false. The maximum statutory fine is the same calculation substituting $11,000 per claim instead of $5,500 per claim. The maximum statutory fine is estimated to be $30,613,000.

SUMMARY DESCRIPTION OF BILLED CLAIMS

17. I was also asked to provide a summary of Dr. Marder's billing for evaluation and management procedures for each year from 2008 through 2014. That summary can be found in Exhibit 11.0 to my Expert Report. A similar annual summary for biopsy and pathology procedures can be found in Exhibit 12.0 to my Expert Report. I have only included the top two biopsy codes 11100 and 11101.

18. I have also been provided a calendar that summarizes each day that Dr. Marder may not have been in the office. The calendar identifies two different instances; 1) "DM OUT" written on a date in Dr. Marder's schedule book, and 2) "Empty Dates" for days when no patients were scheduled to see Dr. Marder. I have summarized all of Dr. Marder's billings into four categories based upon this calendar. The four categories are as follows:

a. DM Out
b. Empty Dates
c. Weekend
d. DM In – all other dates

The summary of billings by category can be found in Exhibit 13.0 to my Expert Report. This exhibit summarizes all procedures.

ADDITIONAL SUMMARY DESCRIPTION OF BILLED CLAIMS

19. The DOJ has also asked me to summarize additional elements of the claims data identified in Exhibit 2 to my report as *Marder Raw Data.xlsx*. The following is an accurate summary of those claims.

20. All of the claims identify the provider rendering the services to be Gary Marder.

21. The total quantity of billed pathology services for which the paid amount was greater than zero is in excess of 35,996.

22. The total quantity of Radiation Management services billed (77427, 77261, 77280, 77300, 77334, 77336) per beneficiary in the sampling frame ranged from 14 to 458.

23. Exhibit 13.0 to my Expert Report summarized the amounts paid for each CPT Code on the days when Marder's appointment books indicated either 1) "DM OUT" written on a date in Dr. Marder's schedule book, or 2) "Empty Dates" for days when no patients were scheduled to see Dr. Marder. The total paid in both categories for the claims billed on those

dates of service was $8,308,259, and when grouped in categories of CPT Codes the totals are as follows:

a. $5,746,399 for services billed under CPT codes in the 77xxx series for radiation related services;
b. $255,651 for services billed for office visits using CPT Codes 99202 through 99215;
c. $920,761 for biopsies and related services billed under CPT Codes 10060 through 69100;
d. $1,267,858 paid for 3,313 pathology procedures billed under CPT Codes 88305, 88312 and 88342.

24. With respect to the radiation treatment CPT Codes 77401, 77402, 77407 and 77412, for dates of services from January 1, 2008 through May 2010, Marder submitted claims to Medicare only utilizing CPT Code 77401, and no claims were submitted during that time frame using CPT Codes 77402, 77407 and 77412. During that time period, Marder was paid for 34,130 procedures under CPT Code 77401 for which he was paid over $750,000 in total.

25. In 2008, total payments to Marder for services billed using CPT Code 77401 were $490,280.56, but those payments dropped to $169,178.48 in 2009 and $130,363.75 in 2010.

26. Marder for the first time began submitting claims to Medicare and TRICARE using CPT Codes 77402, 77407 and 77412 for dates of service commencing in June 2010.

27. In 2011 and 2012, the total amount paid to Marder for services billed under CPT Code 77401 was less than $50.

28. From June 2010 through approximately August 2014, the total amount paid to Marder under CPT Codes 77402, 77407 and 77412 was over $6 million for over 32,000 services.

29. The total paid for radiation claims in the CPT Code 77xxx series for the 249 beneficiaries in the sampling frame was $8,966,035.26. The 20% co-payment owed by the 249 beneficiaries for those services would have been approximately $2,241,500, averaging approximately $9,0002 per beneficiary and ranging from $2,000 to $38,200 for each beneficiary.

30. Marder did not bill any pathology claims using the 26 modifier, and was paid a total of $3,319.47 on pathology claims he billed using the TC modifier.

31. All of the other pathology services were billed by Marder on a global basis with a total paid amount of $2,829,231.13.

FURTHER DECLARANT SAYETH NAUGHT.

Pursuant to Title 28 U.S.C. § 1746, I declare under penalty of perjury that the foregoing is true and correct and is based upon my personal knowledge this 18th day of March, 2016.

Professional Designations

Certified Public Accountant

Certified Fraud Examiner

Michael J. Petron is a Managing Director in the Dispute Advisory & Forensic Services Group. He has experience providing a variety of litigation consulting services, including commercial damages, complex financial transactions, fraud investigation and forensic accounting.

Mr. Petron has 15 years of statistical, accounting and financial consulting experience, which encompasses consulting on a number of significant litigation matters involving fraud investigations, accounting malpractice matters, statistical issues, and damages. Many of his engagements have involved examining large numbers of documents, developing databases and performing analyses across a wide variety of industries. He has testified as an expert, interviewed witnesses, led investigations, prepared reports and assisted counsel during depositions and trial.

Prior to joining SRR, Mr. Petron was a Managing Director at Invotex. Mr. Petron's prior work experience also includes time with a national consulting firm, where he provided statistical, analytical and technical support to litigation cases, and a year in the U.S. Department of Justice's ("DOJ") Office of Immigration Statistics.

Mr. Petron is a member of the American Institute of Certified Public Accountants, Virginia Society of Certified Public Accountants, Association of Certified Fraud Examiners, Washington Statistical Society and the American Statistical Association.

Selected Case Experience:

- Provided forensic accounting expertise to the DOJ's Enron Task Force. His responsibilities included investigating the personal financial structures of the senior executives to uncover possible illegal acts, find potential assets for forfeiture and analyze the accounting behind certain transactions. His analyses included asset tracing for millions of dollars of securities transactions and investigating all foreseeable defenses. His efforts directly lead to the indictment and subsequent conviction of one senior executive on four counts of bank fraud. Mr. Petron conducted numerous witness interviews, reviewed hundreds of boxes of documents and assisted counsel in all aspects of trial.

- Mr. Petron has been engaged by the DOJ's Executive Office for United States Attorneys to provide financial, accounting, data analysis, and statistical expertise to the United States Attorney Office community. His teams primarily assists on False Claims Act cases in the healthcare and government contracting industries. He also assists in criminal investigations and the generation of new targets for potential investigation. Matters often consist of damages determinations, liability analysis through volumnous data examination, kickback/Stark issues, ability-to-pay analysis, settlement negotiation, and sampling. Mr. Petron received an Award fo Excellence by the Council of the Inspectors General on Integrity and Efficiency for his work on the joint DOJ/HHS OIG Advanced Data Intelligence and Analytics Team in 2010. He also received a Special Commendation from the DOJ's Civil Division for contributions made to the Medicare Outlier Analysis Team.

- Supported the DOJ Fraud Section's investigation and conviction in the $2.9 billion fraud scheme of Lee B. Farkas, chairman of Taylor, Bean and Whitaker (TBW). During 2009 TBW was one of the largest privately held mortgage lending companies in the U.S. The fraud scheme also contributed to the failure of Colonial Bank, one of the 25 largest banks in the country.

Michael J. Petron, CPA, CFE

- On behalf of a government sponsored enterprise company officer charged with accounting malpractice, Mr. Petron led a team that analyzed the company's accounting records and the reports and supporting papers of both current and former auditors. A wide range of accounting and auditing issues were under examination, including but not limited to FAS 91, FAS 115 and FAS 133. This engagement involved reviewing hundreds of depositions and interview memoranda. Mr. Petron assisted counsel in depositions and the preparation of approximately 20 expert reports in both administrative and civil proceedings.

- Assisted the DOJ Fraud Section's prosecution of three corporate executives responsible for a Ponzi scheme that defrauded 5,000 investors out of more than $200 million. Mr. Petron was responsible for tracing investor funds, impairment testing on the company's assets, examination of three different auditor's workpapers and determining the accuracy of the company's offering circulars. Mr. Petron assisted counsel during the investigation and trial.

- Testified on behalf of accused public school administrators in hearings centered on an erasure analysis conducted by a state board of education. Mr. Petron testified about the flawed sampling methodology, lack of statsitical inference testing and different confounding factors which may have affected the sample results.

- Investigated a bank's culpability in a major, drug-related money laundering operation. He assisted the Department of Justice with identifying illegal proceeds and their subsequent movements through the bank. He then analyzed deficiencies in the bank's policies and procedures and made recommendations on improving those policies and procedures to preclude subsequent illegal activity.

- Investigated SEC FAS 5 accounting malpractice allegations of an officer from a major medical device manufacturer. Analysis included the applications of US GAAP and IFRS.

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 4.2**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 4.5**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 4.6**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 4.7**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 4.8**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 4.9**

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 4.10**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In s tuations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical bi ling, on average, procedure 77401 was paid at the rate of $34.98.

					Various missing procedures from Revenue Cycle Inc. review		54 165	8 228									
					Beneficiary Total		$ 143,860	$ 22,797									

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.2**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.3**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.4**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.5**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.7**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.10**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.12**

Summary of Reviewed Sampled Claims [1]

Patient B. C.

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.13**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.14**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.15**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.16**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.21**

Notes/Sources:

[1] Data from Revenue Cycle Inc. review extracted from file 'OnePI - Marder 01012008to04152015 Patient Tabs Final Copy Ron and Zach edits.xlsx'

[2] In situations where RCI determined that procedure 77401 should have been billed instead of the procedure that actually was billed, the overpayment damage estimate was calculated to be the actual paid amount minus $34.98. Based upon Dr. Marder's historical billing, on average, procedure 77401 was paid at the rate of $34.98.

United States of America and the State of Florida, ex rel. Theodore A. Schiff, M.D. v Gary L. Marder, et al. **Exhibit 5.22**
